UNC CHARLOTTE

LET'S PLAY WITH

~ Welcome ~

About

girls who code
UNC CHARLOTTE

- **First Half**
  - Hugo
  - Folder structure
  - Files
- **Second Half**
  - Test things out!
  - Things for next meet

Hugo and the Repo

- Let’s walk through some of the folder structure and files

https://drive.google.com/file/d/1r1rxZ9m8S52Ywx_aYrUQps4ChxK03rVH/view?usp=sharing

Fork & Clone

girls who code UNC CHARLOTTE

Prerequisites

Note: All of the following are completed in the GitHub Workshop

- Have the following: GitHub account, VS Code and Hugo installed
  - See setup guide here
  - You can run `hugo version` in a VS Code terminal to ensure it's installed
- Have Git installed and authenticate VS Code with GitHub (if you haven't already)
  - To install git, see here
  - To authenticate VS Code with GitHub, see here
- Fork (on GitHub) and clone the GWC website repo (in VS Code)
  - For more on how to fork, see here
  - For cloning the GWC website repo, clone recursively
    ** Generally, you can clone as shown in the GitHub workshop, but our website uses another repository for the Hugo theme (submodule).*

Fork & Clone

girls who CODE
UNC CHARLOTTE

Prerequisites

Note: All of the following are completed in the GitHub Workshop

- Have the following: GitHub account, VS Code and Hugo installed
  - See setup guide here
  - You can run `hugo version` in a VS Code terminal to ensure it's installed
- Have Git installed and authenticate VS Code with GitHub (if you haven't already)
  - To install git, see here
  - To authenticate VS Code with GitHub, see here
- Fork (on GitHub) and clone the GWC website repo (in VS Code)
  - For more on how to fork, see here
  - For cloning the GWC website repo, clone recursively

    ** Generally, you can clone as shown in the GitHub workshop, but our website uses another repository for the Hugo theme (submodule).*

  - **[UPDATE]** After cloning, run this command in your VS Code terminal:
    `git checkout -b hugo-workshop 4e696588744c83d7e4593c585dd2e74395180089`
    - This gives you the version of the repo before Girls Who Code used it to build their current website

Fork & Clone

- **REPO: https://github.com/GWC-UNCC/Girls-Who-Code-at-UNCC**
  - **Fork**
    - If new to this, see **here** or in the previous **doc**
  - **Clone recursively in VS Code**
    - If new to this, see **here** or in the previous **doc**
  - **Choose to open the folder where you saved the repo**
    - Can explore the files as we talk about them

Note: If you already cloned before the repo was updated, run **this command** in your VS Code terminal
OR you can delete the folder you saved locally and your fork in GitHub, then fork again

girls who code
UNC CHARLOTTE

Let’s Explore!

(Click me to see the doc that will help us explore the files and folders in our repo)

girls who code
UNC CHARLOTTE

Let's Play!

(See if you can make the following changes and solve the challenge of the last change)

girls who code
UNC CHARLOTTE

NOTE: Usually before editing files, you want to pull to make sure you have the latest version *especially if working in a team*

(CTRL + SHIFT + P, select pull, ENTER)

But it will not be necessary for this time

Change the Body Color

girls who code
UNC CHARLOTTE

1. Open the folder where you saved the repo locally and go to:

Girls-Who-Code-at-UNCC/assets/scss/variables.scss

2. Find $body-color and hover over #fff.

This should cause a color picker to pop up and you can choose a new color.

Make sure it's enough of a color difference to notice a change.

3. Save the file and refresh your browser.

4. See if you can find where this change occurred!

An important note to make when working with a template is that changes may not always be made where you expect. When you find the changes, it will help indicate where that css was being used.

Change the Primary Color

girls who code
UNC CHARLOTTE

1. Open the folder where you saved the repo locally and go to:

Girls-Who-Code-at-UNCC/assets/scss/variables.scss

2. Find $primary-color and hover over rgb();.

This should cause a color picker to pop up and you can choose a new color.

Make sure it's enough of a color difference to notice a change.

3. Save the file and refresh your browser.

4. See if you can find where this change occurred!

Change the Footer Text

girls who code
UNC CHARLOTTE

1. Open the folder where you saved the repo locally and go to:

Girls-Who-Code-at-UNCC/layouts/index.html

You'll notice the different partials used in this file.

2. Find themes/roxo/layout/partials/footer.html

Copy the file and paste it in: Girls-Who-Code-at-UNCC/layouts/partials/

3. Find the "I want to visit again" text towards the bottom of the file

**Make sure you're in your new file outside of the themes folder

4. Change the text to anything you want!

For example "Take me to the top!"

5. Save the file and refresh your browser.

Check the footer of the home page.

Replace a Team Member

girls who code
UNC CHARLOTTE

1. Open the folder where you saved the repo locally and go to:

Girls-Who-Code-at-UNCC/data/team.yml

2. Make yourself the new creative director.

Add your name and your linkedin link.

(Feel free to test adding a photo later too!)

3. Save the file and refresh your browser.

Check the team area of the about page.

Note: If the link doesn't work right now, you can still inspect the page see that the link changed. The icons will not change because those are called in the team.html partial and set in the config file.

(To inspect the page, you can hit F12)

Replace a Team Member - CHALLENGE

girls who CODE
UNC CHARLOTTE

4. Can you spot why the LinkedIn link won't work?

Is it just the link you changed or all the LinkedIn links for team members?

5. As a hint, we can go ahead and create a folder called partials inside our layouts folder

(layouts/partials)

6. Find themes/roxo/layouts/partials/team.html.

Copy the file and paste it in your new layouts/partials folder outside of themes

Replace a Team Member - CHALLENGE

girls who CODE UNC CHARLOTTE

7. Take a look at the partials file and see where the link is being used.

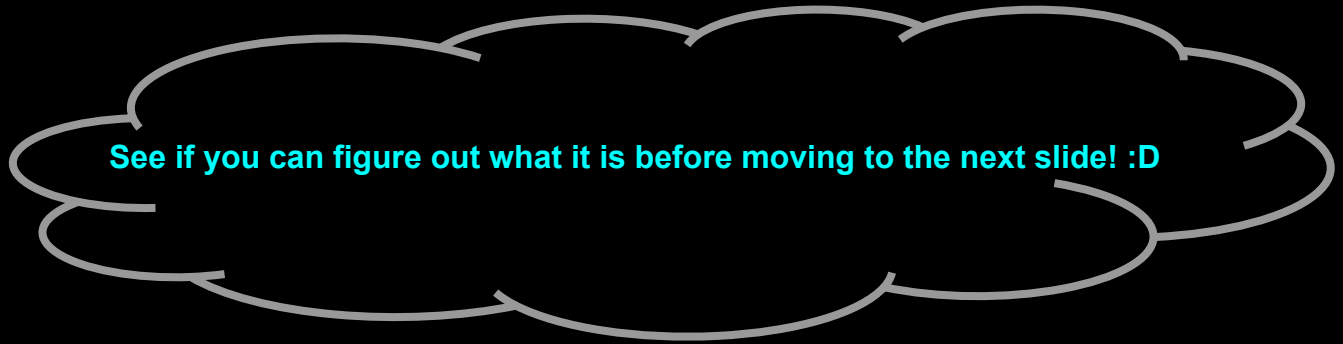

Do you notice a difference in the way it's referred to here versus in teams.yml?

Replace a Team Member - CHALLENGE

UNC CHARLOTTE

7. Take a look at the partials file and see where the link is being used.

Do you notice a difference in the way it's referred to here versus in teams.yml?

Replace a Team Member - CHALLENGE

girls who CODE UNC CHARLOTTE

7. Take a look at the partials file and see where the link is being used.

Do you notice a difference in the way it's referred to here versus in teams.yml?

8. Yep, they labeled linkedIn with a lowercase "i" in team.html.

In team.yml, they used a capital "I"

Replace a Team Member - CHALLENGE

girls who CODE
UNC CHARLOTTE

7. Take a look at the partials file and see where the link is being used.

Do you notice a difference in the way it's referred to here versus in teams.yml?

8. Yep, they labeled linkedIn with a lowercase "i" in team.html.

In team.yml, they used a capital "I"

9. Change "linkedin" in the team.html to a capital "I" with "linkedIn."

Save the file and refresh your browser.

Replace a Team Member - CHALLENGE

7. Take a look at the partials file and see where the link is being used.

Do you notice a difference in the way it's referred to here versus in teams.yml?

8. Yep, they labeled linkedIn with a lowercase "i" in team.html.

In team.yml, they used a capital "I"

9. Change "linkedin" in the team.html to a capital "I" with "linkedIn."

Save the file and refresh your browser.

10. Check the team section on the about page again.

Does the link work?

Nice! You spotted an error!

Commit & Push

girls who code
UNC CHARLOTTE

Note: If you have not done this before, see more details **here**.

1. Make sure any files that have been changed are saved.

You will see a circle in the right hand corner of the tab with that file if it's unsaved.

2. Go to the source control panel, stage all commits, and type your commit message.

3. Hit CTRL + ENTER to commit

4. Hit CTRL + SHIFT + P to open the command palette

Select push and hit enter

5. You should see your changes pushed to your fork

Want to Join the Team?

- Only as much time as you want to put in
- Planning to develop over summer too!

- **Positions** *can change and/or have multiple
  - Contributors
    - Work with code, push to repo
  - Reviewers
    - Raise, organize, and track issues
  - Documenter
    - Keep repo and code easy to understand and maintain
  - Observer
    - Just want to be included and learn

https://bit.ly/3rmkpzT

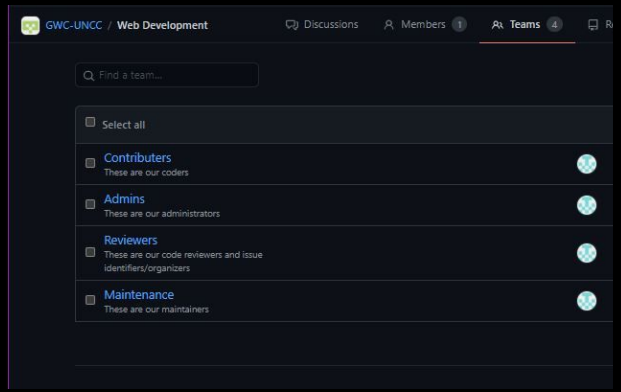

girls who code
UNC CHARLOTTE

GitHub Team

GITHUB UPDATES

- Those who forked the repo were added to their chosen positions on the GitHub Web Dev Team.
  - For contributors, documenters, and reviewers, forking the repo is how I will see your GitHub username and add you to the team
  - Completing the workshop is an important part of learning to work with the repo to be in these positions

- If observer was the position you wanted:
  - You can drop your username in Discord or DM me, and I will add you as an observer.

If you've been added to the team

- Please still practice with your fork, not the repo directly yet.
  - We will go over guidelines, procedures, and planning for issues, pull requests, and such soon. Then you can start working with the repo directly!

For Next Meet

- **The date, time, and topic is TBD** *(until after elections)*

- **In the meantime, you can:**
  - Practice changing things, pushing, pulling, etc. and working with your fork
  - Run through the GitHub Workshop *(if you haven't already)*

- **Feel free to reach out!**
  - Code Lounge should still be weekly
  - You can also email me at aharmo23@uncc.edu
