Note: The project repo has had some updates since the Web Team finished things in May 2022.

Web Team Guide

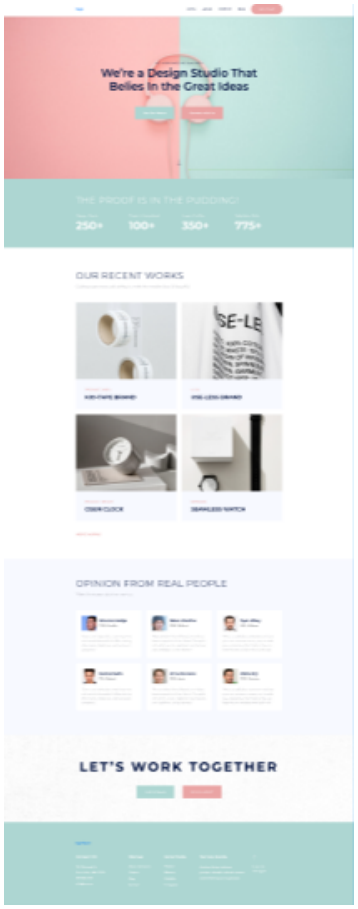

Building GWC's New Website

Overview

Girls Who Code at UNCC is in need of a new website. We currently have a **single-page site** to act as an information hub but are looking to build out a full website that is easier to maintain and has more pages. We created our Web Team to do exactly this!

Last year we picked a template, started general documenting, and finished the design of our new website. **This semester we start DEVELOPMENT!**

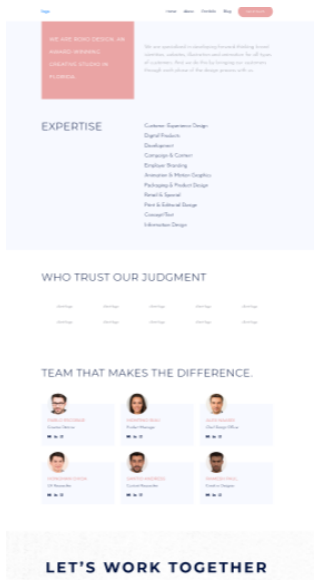

Check out some examples of our design that we will be adapting our template to below:
(full design access will be added next week)

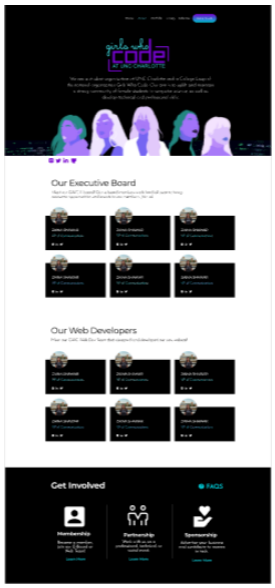

Template Home Page

GWC Home Page

Template About Page

GWC About Page

🙋 Joining

The deadline to join the team was Feb 14th. However, any GWC members are welcome to come check out what we are doing, and you can learn from the guide on your own if you want to practice! You just will not be added to our GitHub team or eligible for a Web Team certificate at the end of the semester.

Perks

Joining our Web Team comes with some awesome perks:

Celebration of GitHub Milestones (+ general socials)

- Pizza & Socials on Ash (outdoor distanced and/or virtual)

Work Experience

- Part of a Boss Group of Women
- Collaborative Development
- Knowledge of GitHub, VS Code, Hugo, and more!

Documentation

- Social Media Shoutouts! (for team milestones and highlighting individual members)
- Certificates (read more on this later)

Meet Our Leads

Ashley Harmon

Team Lead & Developer

GitHub: bluelotus03
Best Way to Contact: Discord DM

Zaina Shawar

Lead Developer

Email: girlswhocodeuncc@gmail.com
Discord: zaina#7086
GitHub: zshawar
Best Way to Contact: Discord DM

Requirements

There are no technical or experience requirements to join the team!

The only requirements are attendance and participation.

* Type of participation is position-dependent

Absences | Up to 2 absences are allowed from weekly meetings with at least 24hr notice
If there are extenuating circumstances, please reach out to Ashley and we can work it out.

As a general rule, attendance is needed for us to stay on the same page and move forward at a reasonable pace. Due to the amount of materials covered at our meetings, being more than 15 minutes late to a meeting will count as an absence. Absences will begin counting on Monday, February 14th.

Cameras | We do ask that you have your camera on during our meetings

This ensures we are all actively engaged and helps us connect with a virtual setting. While I do understand there are times you may need to turn off your camera, please plan the best you can to have them on. **This is how we will add to your active hours for your certificate!** :D

Experience | All experience levels are welcome, and with the materials in this guide, you should be able to set up your development environment and join our team on GitHub with ease. As you go through these materials, if you run into any issues or have any questions, please don't hesitate to reach out to Ashley Harmon or Zaina Shawar on Discord!

Schedule

When & Where | We will meet virtually once a week starting on January 31st!

Mondays from 5:00pm - 6:00pm | Zoom Link

* Must be signed into zoom with your UNCC login

What | Our weekly check-ins may not last the whole hour, but we have that time allotted in case there is a need for the hour. The first part of each meeting will be a quick attendance check and going over any new instructional materials we have. Then the second half will be:

1. A quick check on our current task list from the previous week to see what progress has been made, any questions or issues we have run into
2. Plan what each of us will do for the following week

If any additional technical help is needed as a group, we'll do that in the meeting. If any additional technical help is needed one-on-one, the rest of the meeting time can be used for this while others have the choice to leave the call.

Meeting Prep | To keep our meetings running smoothly, on-time, and making steady progress on the website, please come to our meetings having done the following:

- Review the current week's materials (if there are any videos or steps to complete)
- Have your status update for any current tasks on your to-do list
- Have an idea of what you plan to, or would like to, do for the following week
- List out any questions you have run into in the previous week

Goals

We are trying to create one place for Girls Who Code at UNCC to keep all of their important information, resources, and more. This not only helps GWC, but also those looking to join, partner with, or sponsor us. With that in mind, our main goals this semester are:

1. **Initial website launch by May 2022!**

1. **Maintainability & Scalability**
    a. Thorough, helpful documentation

2. **Build our portfolios**
    a. Gain web development and teamwork experience

Most importantly, have fun, learn a lot, and meet some wonderful people!

Team Info

More on these positions, using GitHub for the tasks associated with the positions, and our workflow will be added soon!

Positions

The following are our main categories of team positions. Any position you want **only involves however much work you can, or want to, put in** for that position. If you are a part of the Web Team (attend and participate in meetings), you can fill multiple roles and change roles at any time! (if you already completed your setup by the deadline). Just note to receive **certificates** that are position-specific will require active engagement in that position throughout the semester (at least 7 out of 9 meetings left).

💻 **Developers** | Responsible for editing and contributing to the website's code

aka "Coders" will edit the current template code to match our Figma design and ensure good documentation of their code.

📝 **Archivists** | Responsible for keeping repo and code easy to understand and maintain

aka "Documenters" add comments to code, work with Markdown files, document our team's workflow and organization, and add ideas to help keep the repo maintainable and scalable. If you would like to get a head start on exploring these kinds of tasks, GitHub has some documentation on these things **here**.

📑 **Analysts** | Responsible for raising, organizing, and tracking issues

aka "Reviewers" can submit bug reports, feature requests, etc. Reviewers will use our Figma design as sections of the website are complete to determine if anything is missing or needs improvement. If you would like to get a head start on exploring these kinds of tasks, GitHub has some documentation on these things **here**.

📚 **Trainees** | Just want to be included to watch and learn

aka "Observers" who just want to come watch and work on the learning materials without officially being on the team are not required to attend every meeting. However, observers who do wish to receive a certificate for observing and learning as a part of the Web Team will still need to be present at each meeting. Those who are a part of the team are welcome to offer input, be a part of decision-making, and jump into other positions at any time!

Certificates

This semester, we are giving out certificates for being part of the Web Team in your chosen position. To be considered part of the team, you must meet the following requirements:

1. Meet the **absence requirements** for Web Team Check-Ins
2. Be an **active participant** for your chosen position(s)
   This means contributing at least something each week for any position other than Trainee.

Certificates will also contain the general number of hours you have put in. These will be calculated by the following:

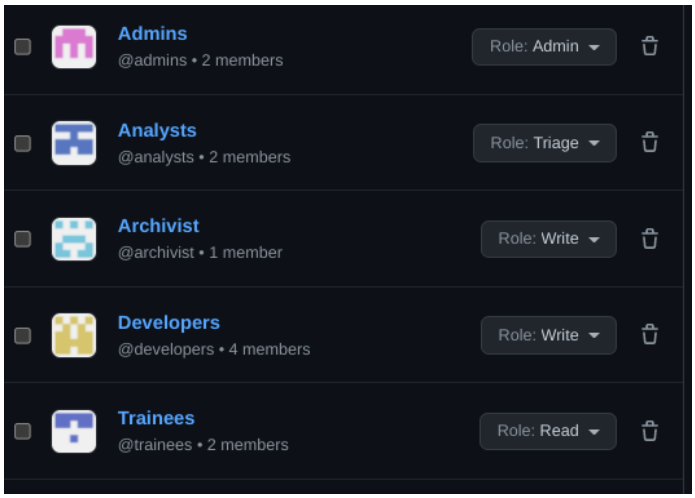

1. Each Web Team Check-In = 1 hour
2. Each Specific Issue Closed* = 2 hours

*Please note: Issues completed with clean, well-documented, functioning code will be closed upon review by Zaina and Ash. The goal is to have quality code that is maintainable, and we only encourage you to take on issues you have time to complete. Each position on the team is only as much time as you have, or want to, put in. There is no pressure to have more hours.

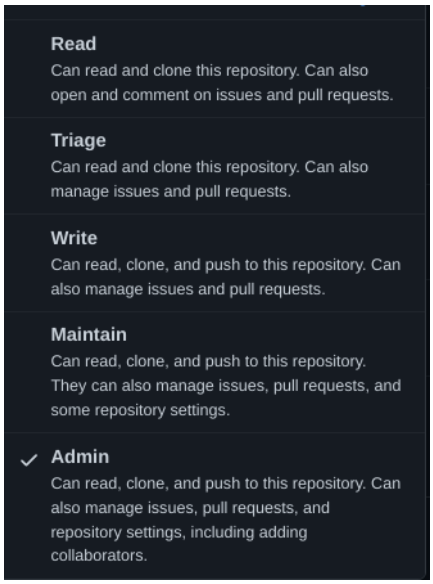

GitHub Organization

Our Web Development Team on GitHub has 5 sub teams: Admin, Developers, Archivist, Analysts, and Trainees. All team members should have been added to their chosen positions. If not, please **see here**. Each sub team matches a position from **above**.

The permission given to each sub team are as follows:

Details on the permissions are as follows:

Google Drive Folder

All Web Team members should have access to our team's Google Drive folder, **GWC Web Team - SPR '22**. There may be materials we have not used or looked at yet this semester. If that is the case, please ignore them until they are referenced. Materials will be referenced as they are needed throughout the semester.

Environment Setup

If you want to join the team in any position other than a Trainee, you'll need to have your development environment setup. You won't necessarily need to help develop the code to be an Analyst or Archivist, but having your environment setup will allow you to view other people's work locally and review or comment on it, among other things that we will get into later.

If you are joining as a Trainee and still want to learn and follow along with the team or run through our weekly materials, you can also follow along below to set up your environment! **Any other team position is required to have completed the setup below to be added to their corresponding sub team on GitHub**. **Workshop completion can be seen in your GitHub history.**

GitHub, VS Code, and Hugo

All resources used in the following workshop recordings can be found in their video descriptions.

Setup | There are two options for setting up your development environment

Option 1: Use the **Setup Guide**
Option 2: Follow along with the **GitHub Workshop: Setup & Basics** (up to 29:45 min)

GitHub | There's one main option for getting acquainted with GitHub

Step 1: Follow along with the **GitHub Workshop: Basics and Next Level**

Hugo | After installing Hugo, it's time to play around with the repo to learn how it works

Step 1: Follow along with the **Let's Play with Hugo!** Workshop

Learning Resources

Resources will be added in this section as we go along each week to learn more about using GitHub, Hugo, VS Code and any languages we will encounter in the code. The languages you will use will depend on the particular task or section of the website you work on. That is something that will be noted in the tasks themselves so you can choose ones with languages that you want to learn or use.

As resources are added, they will be linked in the respective week's TODOs. Some may be labeled optional for if you want to dig further into any particular topic, and some will be important for anyone participating as Developers, Analysts, or Archivists to learn.

Come across any good resources for any of the topics in this section?
Share them with us! You can DM them to Ashley or pop them in the #web-team channel on Discord.

Languages

Our website templates utilizes several languages that you will interact with, depending on which parts of the site you work on. **Most work will require use of HTML, CSS, and some Markdown**. You do not need a deep base of knowledge for any of these languages to work on them though. This is a learning process for everyone on the team, so the key is learning how to use online resources to learn along the way.

It is, however, good to have a basic understanding of each of these languages and how they work together. To do this, you can start exploring some of the resources listed below! Keep in mind, this is a very short, basic list. You are free to find tutorials, short projects, or any other materials you'd like to use to learn with as well. Also keep in mind, you don't need to watch/read every resource, they are here to offer different ways to learn (articles/blogs, videos, etc.) and just to help you get started.

Something that will also help you know what languages/topics you will want to research further is exploring the code for our current website template used in the **Let's Play with Hugo Workshop!** Through exploring how everything works together, you can get a better sense of what you might want to work on.

General Recs: **ProgrammingwithMosh, FreeCodeCamp, W3Schools** are usually great!

HTML | HyperText Markup Language

Introduction:

- **HTML for Beginners**
- **W3Schools Tutorial**
- **HTML Crash Course**
- **Some sections of the website will require using Bootstrap components**

  Some examples include the FAQ section (accordion component) and quotes section on the home page (carousel component). There may be parts you will have to customize for the component, but Bootstrap gives us a lot of the structure and functionality.

  For these, you would incorporate the HTML from the corresponding Bootstrap component in your partial HTML file for that section. As you can see when you scroll down on a component section, Bootstrap offers different looks/options for each component, so you would select the one that is closest to the prototype (though it won't be exact - that is something we will address with style issues later).

  Then you can still incorporate the data/text to be listed in the same way you have for other sections, just plugging it into the HTML file.

  The link above for the first Bootstrap component is an accordion example, and we would just replace the plain text with our code that pulls from our yml files.

CSS | Cascading Style Sheets

Introduction:

- **W3Schools Tutorial**
- **What is CSS?**
- **CSS Crash Course**

More detailed:

- **CSS Flexbox Crash Course**
- **Learn CSS Units**
- **CSS em and rem**

SCSS | Syntactically Awesome Style Sheets (SASS)

Introduction:

- **SASS Basics**

JS | JavaScript

Introduction:

- **Javascript for Beginners**
- **W3Schools Tutorial**
- **What is JS?**

More detailed:

- **Full JS Course**

MD | Markdown

Introduction:

- **What is Markdown?**
- **Markdown Crash Course**
- **Markdown Guide**

YAML | Yet Another Markup Language

Introduction:

- **YAML Tutorial**
- **YAML in One Video**
- **Example of adding specific words as a link from the Axe Hacks site**

  Note: The classes may be different/do different things for our website

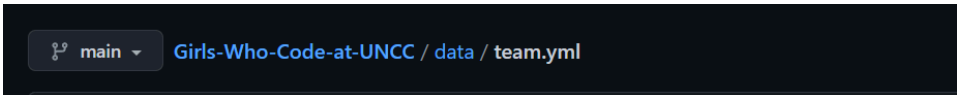

```yaml
  # service item loop
  - title : "Challenges & Prizes"
    images:
    - "images/service-2.png"
    content : "As we focus on beginners, we have a var
    button:
      enable : true
      label : "See Devpost"
      link : "https://axe-hacks-2022.devpost.com/"
```

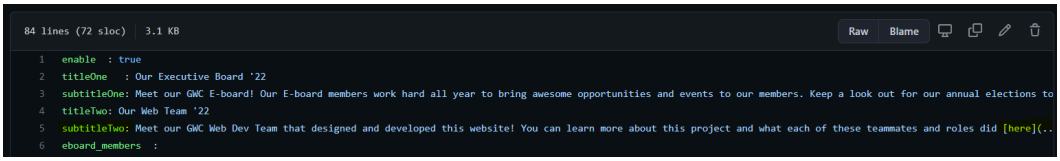

→ **YAML**

```html
<div class="col-md-6">
  <h2 class="section-title">{{ .title | markdownify }}</h2>
  <p>{{ .content | markdownify }}</p>
  {{ if .button.enable }}
  {{ with .button }}
  <a href="{{ .link | relURL }}" title="{{ .label }}" class="btn-link u-purple">{{ .label }} <i
      class="fas fa-arrow-right"></i></a>
  {{ end }}
  {{ end }}
</div>
```

→ **HTML**

- **Example of adding linked text** (when within a paragraph/sentence)

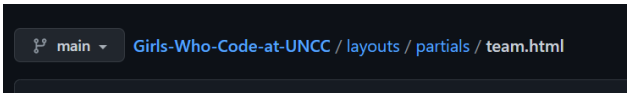

Note: *The format for links within the text is just like that in MD files, and here the path is ../portfolio/gwc-website-project/ since it is linking to another part of the website. If it was an outside link, you would do the https://linkehere.*

```yaml
a look out for our annual elections towards the end of each spring semester to see how you can join us!

nese teammates and roles did [here](../portfolio/gwc-website-project/).
```

→ **YAML**

```
<section class="site-team">
  <div class="container">
    <div class="row">
      <div class="col-12">
        <div class="section-title">
          <h2>
            {{ .titleTwo }}
          </h2>
          <p> {{ .subtitleTwo | markdownify }}</p>
        </div>
      </div>
      {{ range .web_team_members }}
      <div class="col-lg-4 col-md-6">
```

→ **HTML**

- **Example of adding images as a link from the [Axe Hacks site]**

```
################## Sponsors ######################
sponsors:
  enable : true
  title : "Sponsors"
  sponsors :
    - img: "images/echo3D-Logo.png"
      url: "https://www.echo3d.co"
    - img: "images/IncovateSolutionsLogoMain.svg"
      url: "https://incovatesolutions.com"
    - img: "images/LDC-Logo.png"
      url: "https://linktr.ee/LotusDC"
```

→ **YAML**

```
<div class="container">
  <div class="row">
    <div class="col-lg-10 row align-items-center mx-auto justify-content-around">
      {{ range .sponsors }}
    <div class="col-lg-6 col-md-6">
      <a href="{{ .url }}">{{ with .img }}<img src="{{ . | relURL }}" alt="" class="img-fluid sponsor-logos">
        {{ end }}
      </a>
    </div>
    {{ end }}
  </div>
  </div>
</div>
```

→ **HTML**

JSON | JavaScript Object Notation

Introduction:

- **What is JSON**
- **W3Schools Tutorial**
- **JSON Syntax**

GitHub

Resources on how to use GitHub will be added here. For now, completing the workshops in the **Environment Setup** section should help give a basic overview of things. You can view our website template **here**.

Hugo

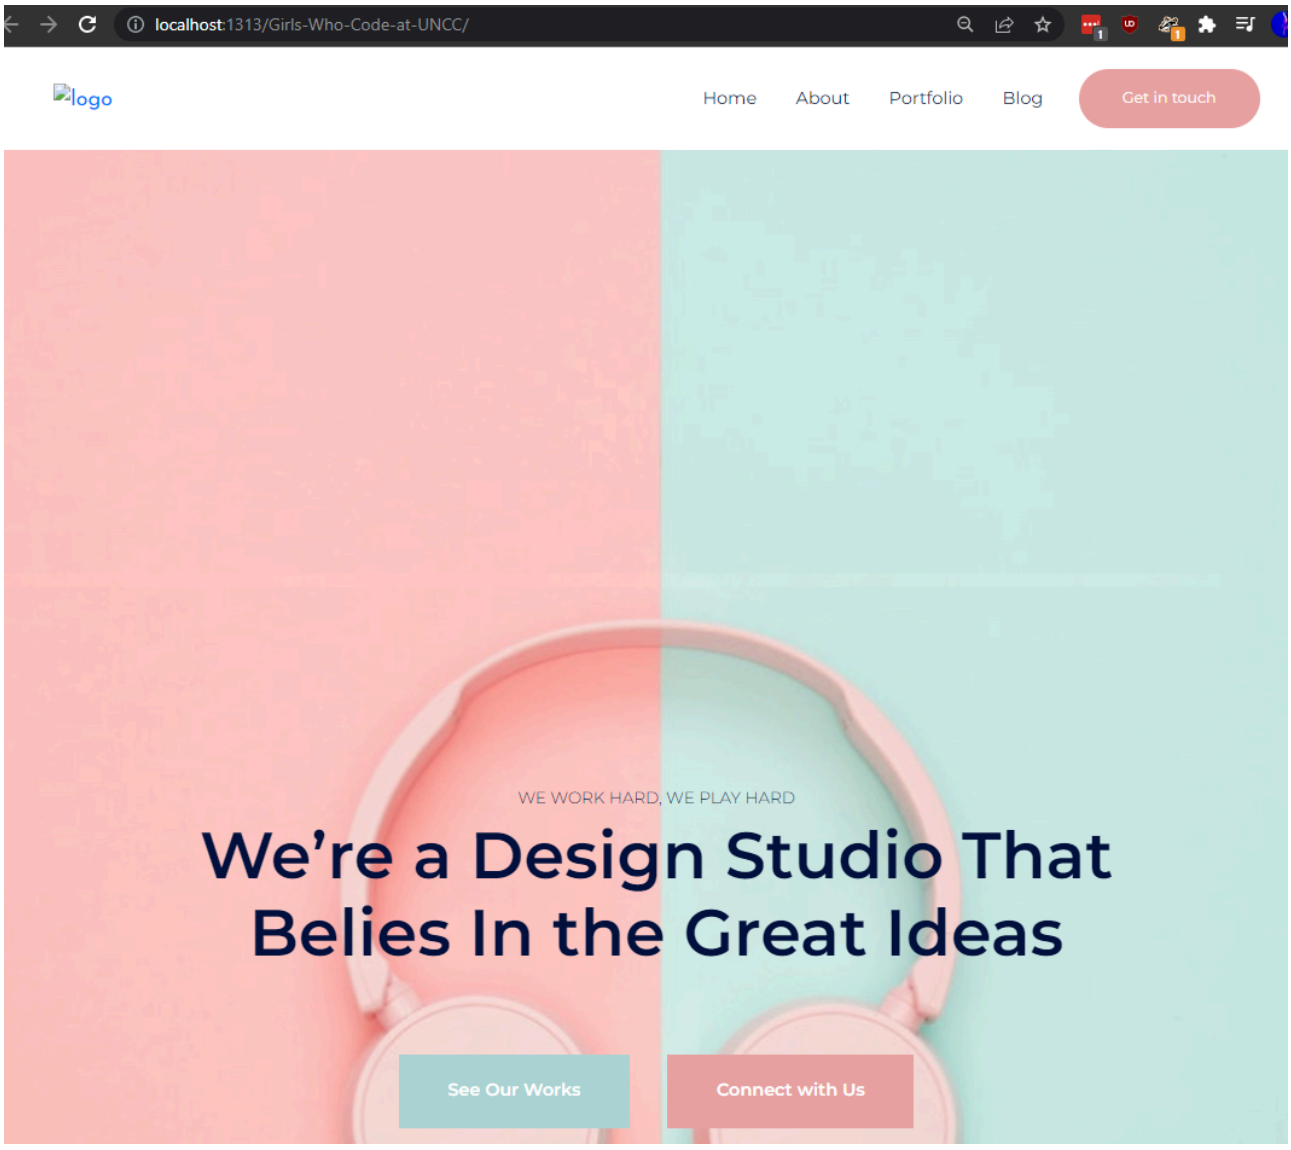

Resources on how to use Hugo will be added here. For now, completing the workshops in the **Environment Setup** section should help give a basic overview of things.

Run Hugo Site | hugo server -D

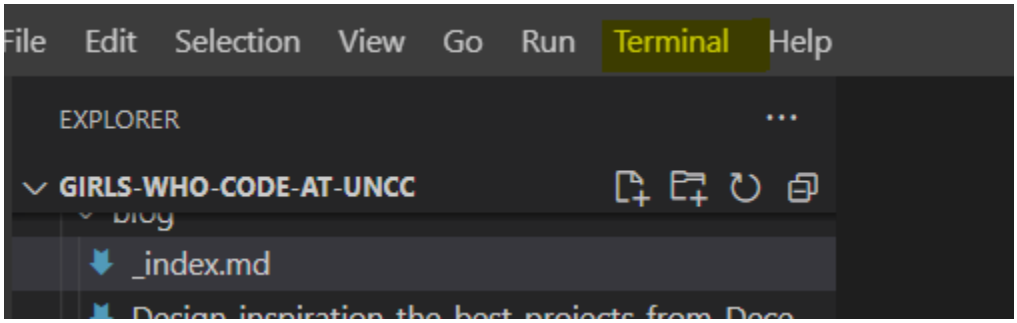

Type this command in your VS Code terminal: **hugo server -D**, and hit **ENTER**.
This will run the website locally and you can hold CTRL and click the localhost link shown below:

```
Environment: "development"
Serving pages from memory
Running in Fast Render Mode. For full rebuilds on change: hugo server --disableFastRender
Web Server is available at http://localhost:1313/Girls-Who-Code-at-UNCC/ (bind address 127.0.0.1)
Press Ctrl+C to stop
```

This will show you the website (pic below is the current state at the time of this doc but may be different when you run it):

Don't have a terminal showing?
Click **Terminal** in the top left menu, and select **New Terminal** (it also shows the shortcut CTRL + SHIFT + `)

Stop Server | CTRL + C

If you want to stop the server, Make sure you're in your terminal, then hit **CTRL + C**.

Hugo Resources | Understanding Hugo More

Getting Started:

- **Hugo Documentation**
- **Hugo Tutorials** (Can skip installing, that was part of Environment Setup)

Using Our Template:

- **Web Team Demo** (March 16th)

VS Code

Resources on how to use VS Code will be added here. For now, completing the workshops in the **Environment Setup** section should help give a basic overview of things.

Figma

Team members will not need to know how to create/edit materials in Figma, just how to navigate it to view it or create comments. Check out the basics from our previous **Figma Workshop**.

Using GitHub

Resources will be added in this section each week according to what instructions are needed to complete that week's tasks. If you want additional resources or guides for using GitHub, see the **GitHub section** in the Learning Resources.

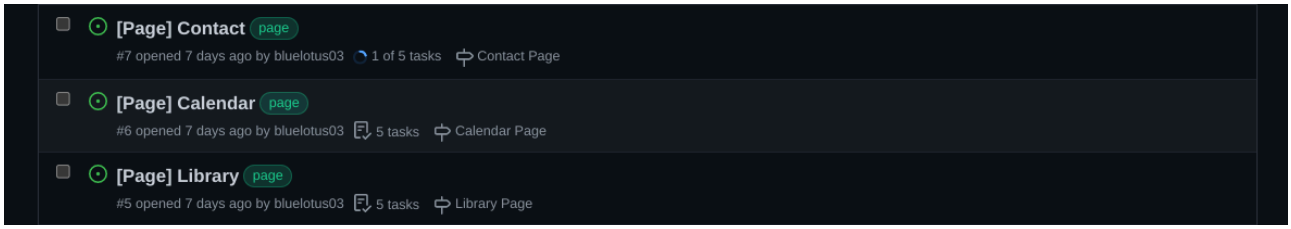

Issue Setup

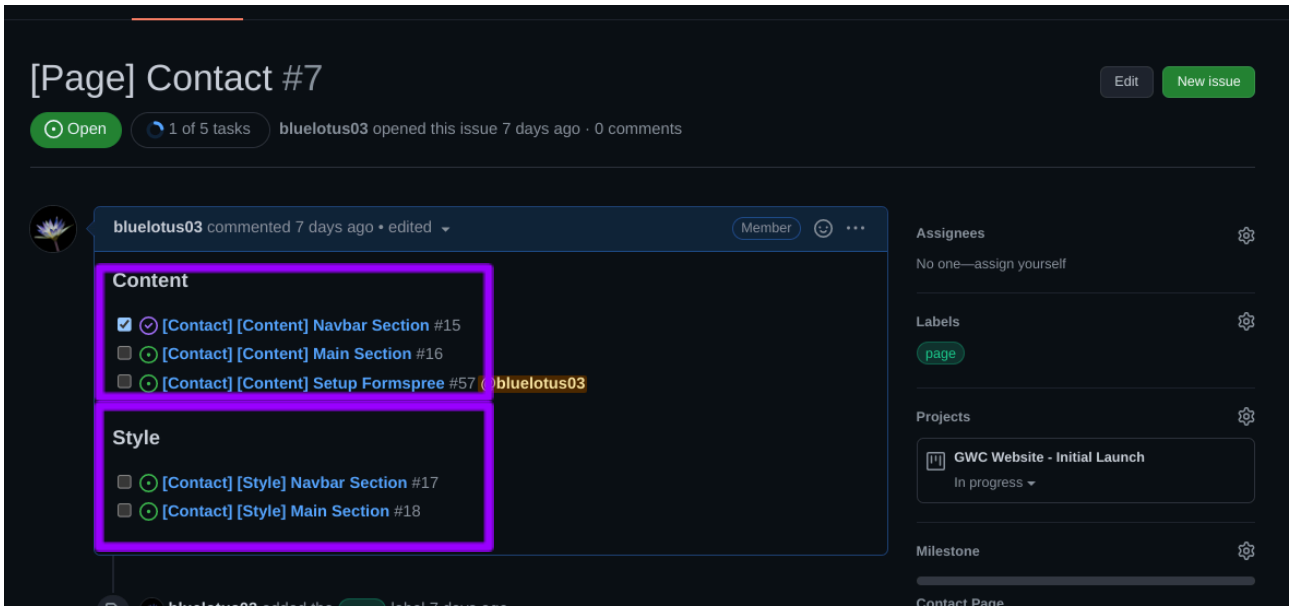

Most projects will not require the amount of GitHub issues we have. We have gone into greater detail and divided issues further into smaller pieces to help the learning and collaboration process, also helping to allow people to choose as large or small sections of the website they wish to work on. Below you can learn more about how these are set up in general and what kinds of things you'll need to pay attention to.

Page Issues | An issue per page on the website

Each page of the website has its own issue that is broken into 2 categories: Content and Style. While we are initially working on creating all issues for both categories, **we will focus development on content first**. Once content for all pages is completed, we will work on style for all pages.

Please note: You will not edit the task lists on these page issues, only check off the box next to sections once you complete them.

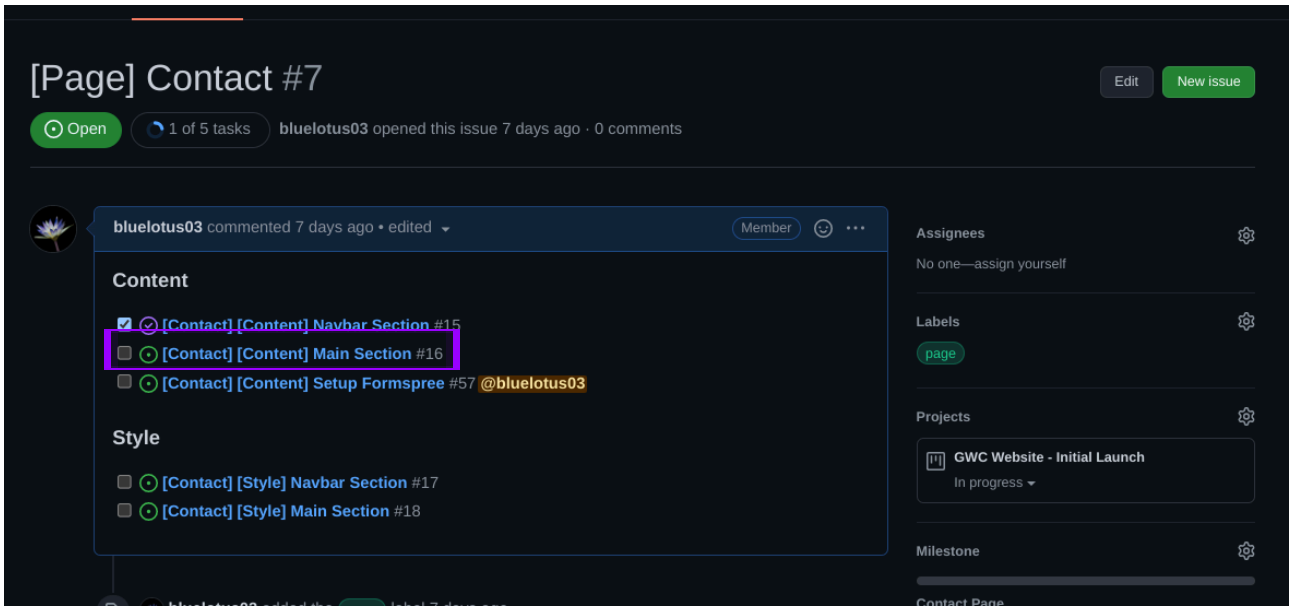

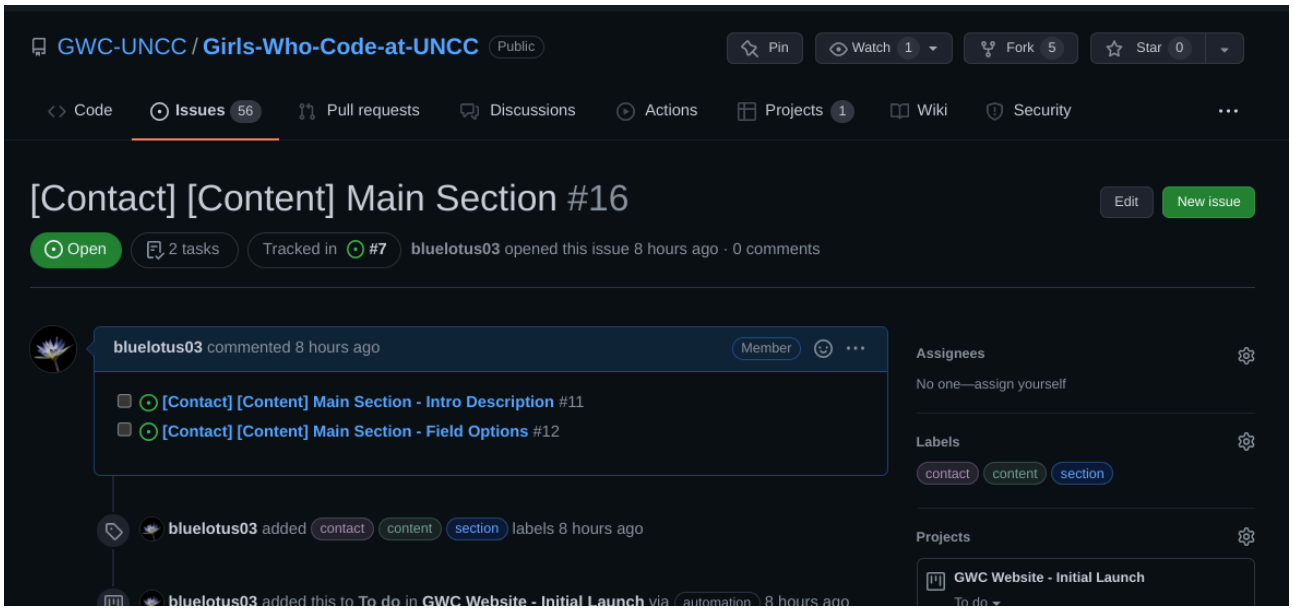

Section Issues | An issue per section of each page on the website

Each section of any given page of the website has its own issue. You may see the same section repeated for Content and Style, and that is because, as the name implies, they will focus on different aspects of the same sections.

Some sections may not need issues in both categories: Content and Style. For example, the Navbar Sections for each page only need a section issue under the Style category. This is because the navbar itself is being created as part of a larger issue by Ash and Zaina (see below). The only thing that will need to be done *per page* is ensuring the right menu option is shown in light blue, indicating to the user what page they are currently on.

Please note: The only editing you will do to these section issues is to add task lists (boxes) with the issues you create for that section. Then you will check off those boxes during development as you take care of each specific issue.

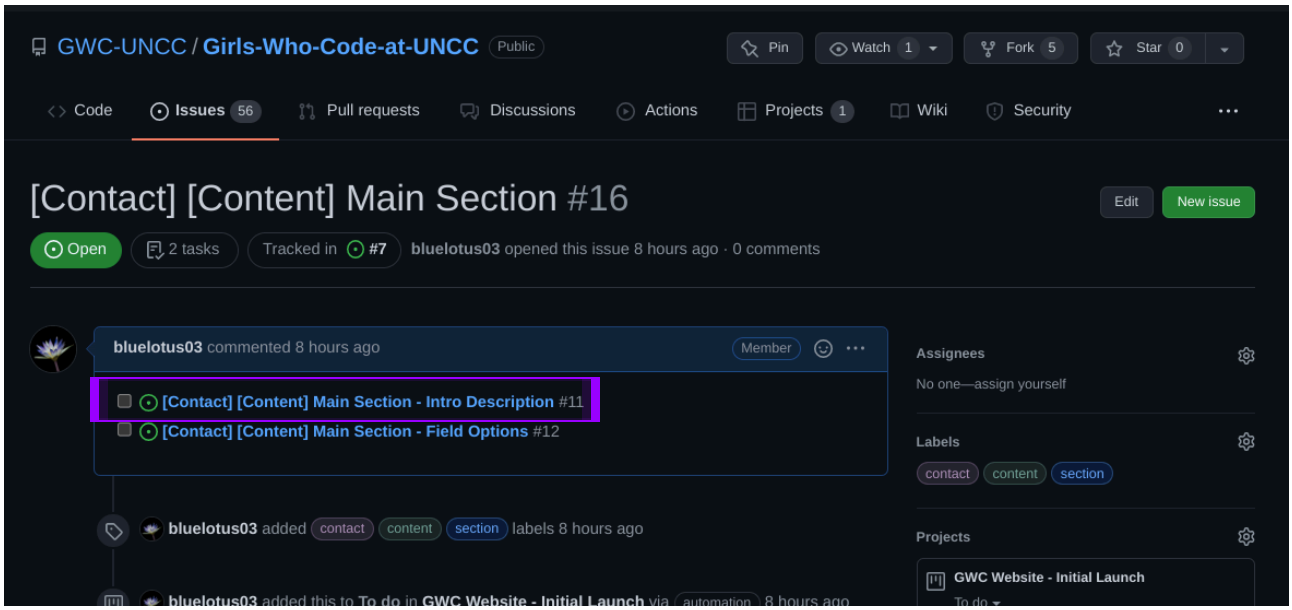

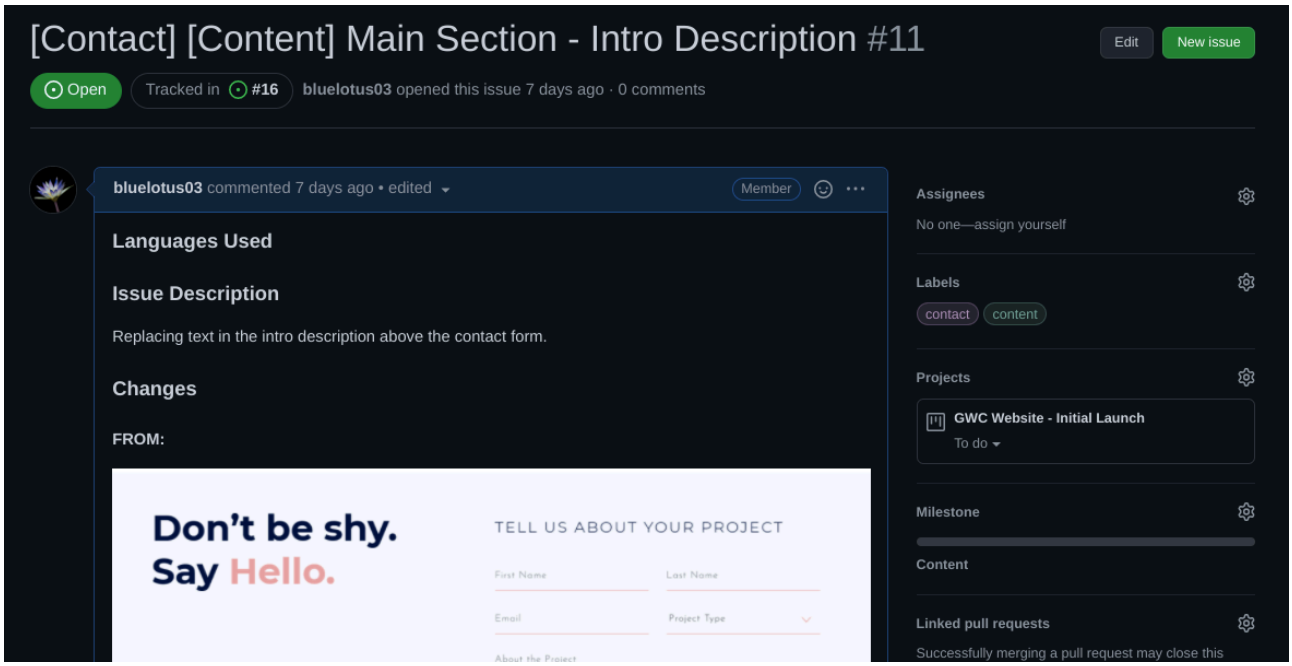

Specific Issues | Any issues involved in completing that section of a given page

For each section of a given page, you will have smaller issues that we create to keep track of all changes that need to be made to that section. For example, on the Main Section of the Contact page, the intro description and field options need to be edited as part of the Content category. So those are each their own specific issue that are listed on the [Contact] [Content] Main Section issue.

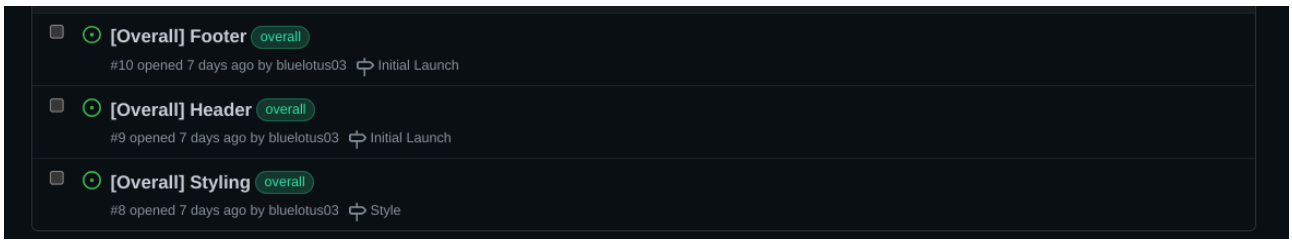

Please note: These are the issues you will create. We have issue templates for doing exactly that! All you'll need to do is fill them in and link them to the correct section issues. Instructions for these in the **Creating Specific Issues** section.

Overall Issues | Issues for pieces of the website that are found on all pages

These issues are being worked on by Ash and Zaina to create CSS variables (like our main colors) or reusable button styles that you can add to your pages. This also includes the header and footer that will appear on all pages.

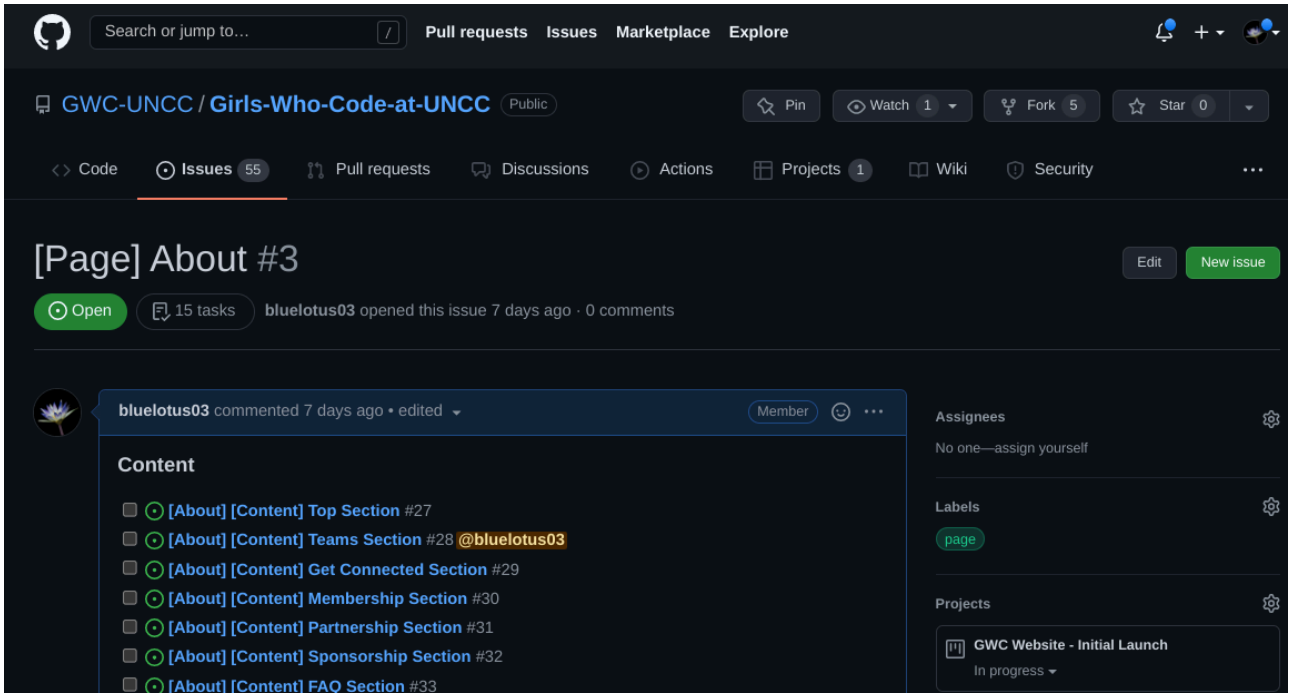

Creating Specific Issues

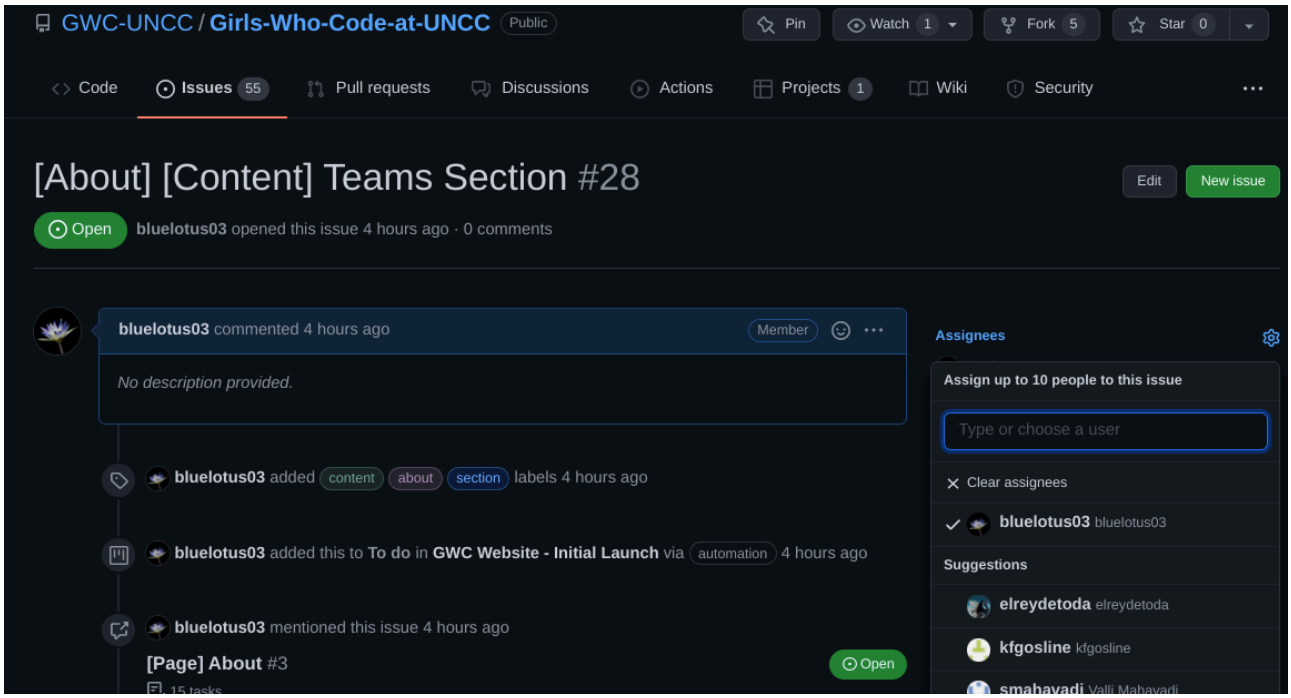

As you can see from the previous section, our main page and page section issues are already on our repo. What we want to do now is work on adding the smaller issues for each page section. At our team meeting, you should have chosen what page section(s) you wanted to work on. For each of those, follow the steps below.

First, assign yourself to the issues you signed up for in the meeting:
Note: Please do not assign yourself to any issues that you did not choose in the meeting. If you would like more issues than you originally picked, just reach out to Ash via DM on Discord.

1. Go to our issues page: https://github.com/GWC-UNCC/Girls-Who-Code-at-UNCC/issues
2. Start on page 3 to find the [Page] Issues
3. Open any pages you signed up for sections on, and you should see your name next to that section issue (ex. Below @bluelotus03 is shown next to a section issue)

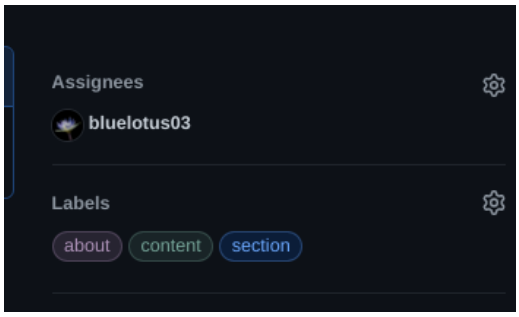

4. Click on the issue name to open the issue
5. Once the issue is open, click **Assignees** and select your name from the list
   This should make a checkmark next to your name. If you select someone else by accident or want to remove yourself, you can click the **Clear assignees** option in that list.

6. Click anywhere outside of the list to close it, and this saves the assignee

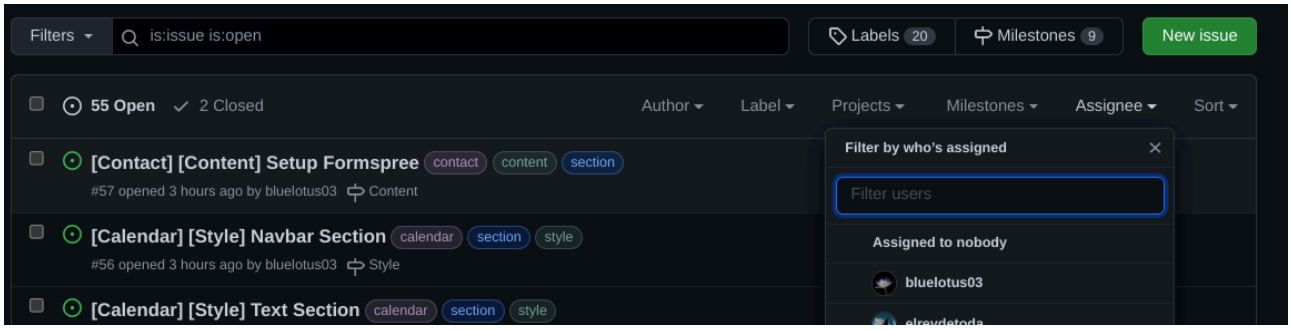

7. Repeat these steps for each section issue that has your name next to it
   As long as you see your name in the Assignees section, like below, for each of those sections issues, you are set for the next steps!

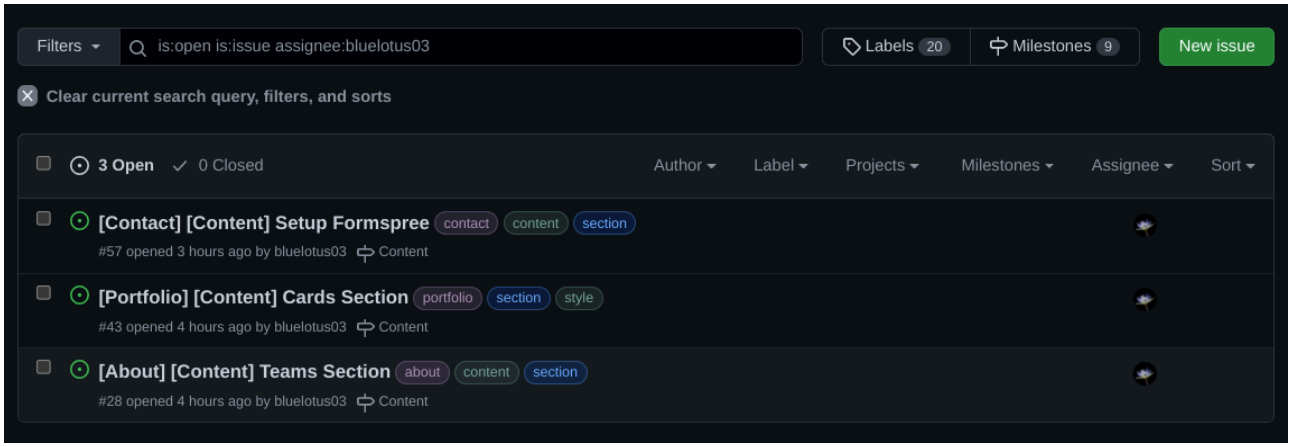

Now you can start creating issues for that section! :D

1. Go to our issues page: https://github.com/GWC-UNCC/Girls-Who-Code-at-UNCC/issues

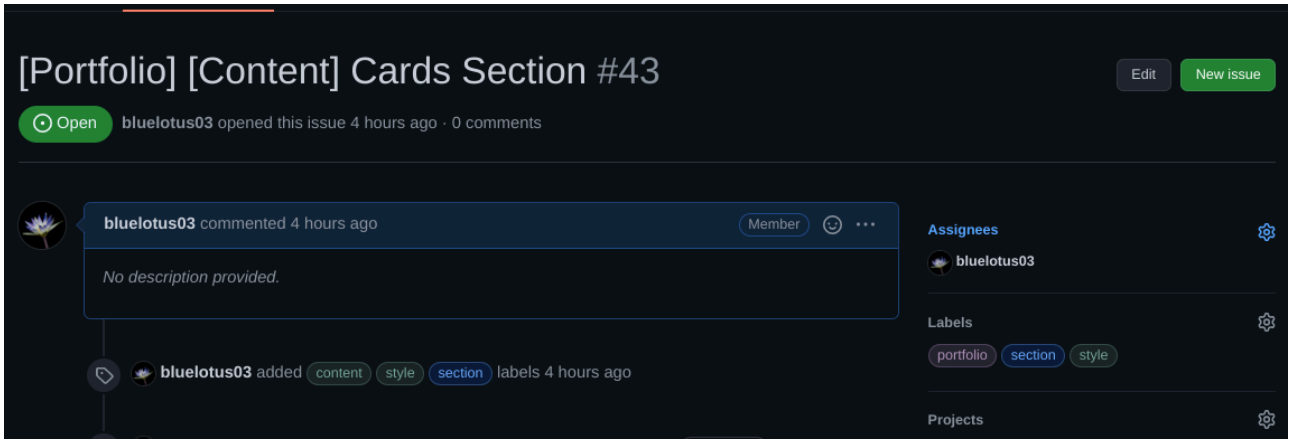

2. Sort by Assignee, select your name

3. Click on any of the section issues assigned to you to get started

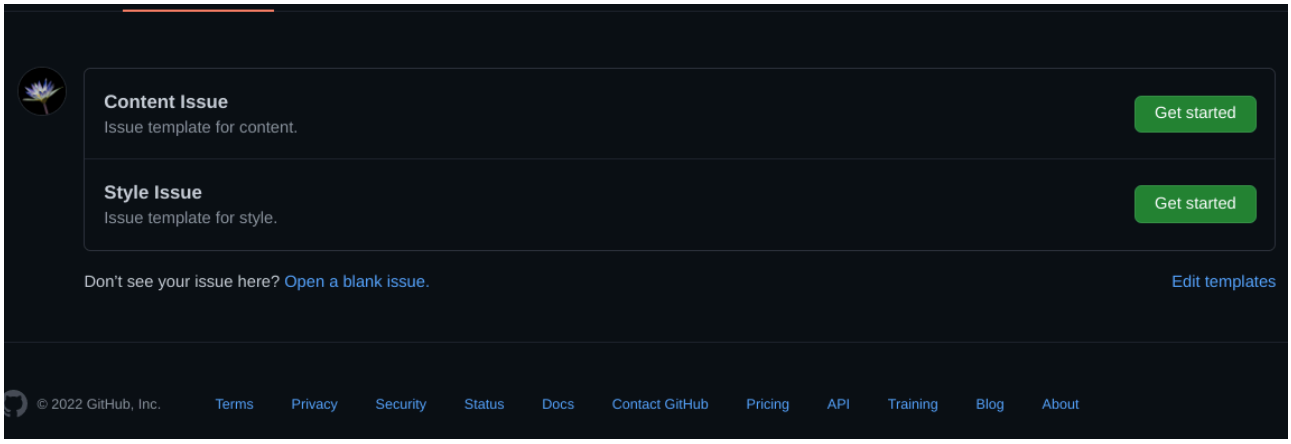

4. Once you have an issue opened, it should look empty like below
(unless there is a special note, in which case, you can leave the note and add things below it.)

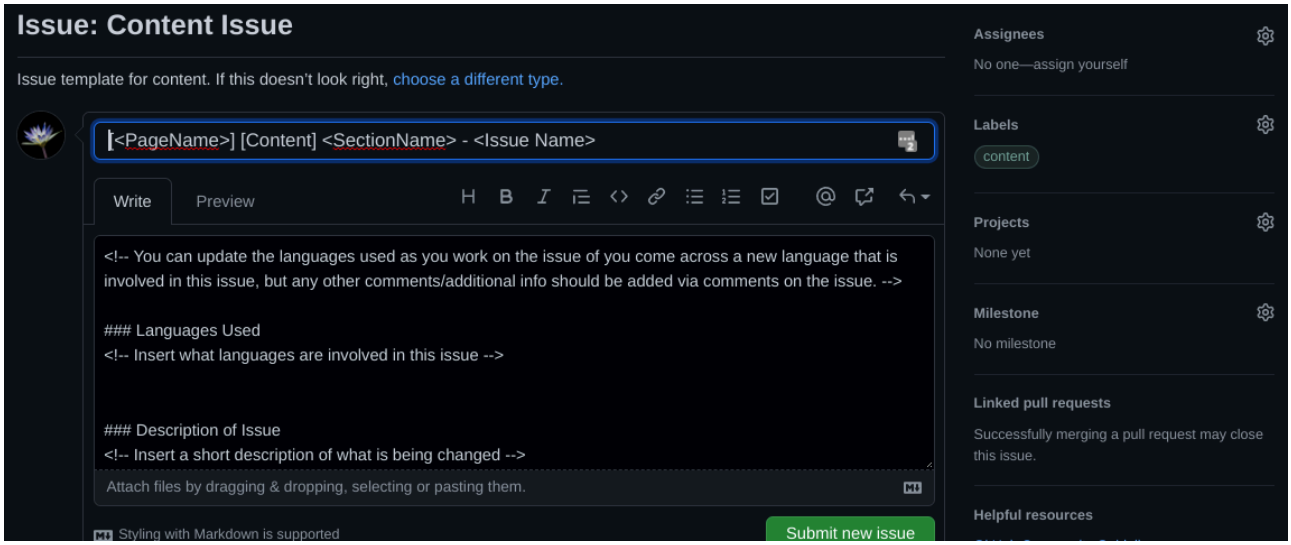

5. Hold CTRL and click the green **New Issue** button in the top right
This will open the new issue in another tab while keeping your current section issue tab open, which just makes things easier later.

6. On the new issue screen, you should see 2 issue templates: Content Issues and Style Issues. Choose the **Get Started** button corresponding to the section you are working on.

For example, my section issue said [Portfolio] [Content] Cards Section, so I know I want a Content Issue. Then I will click the **Get Started** button next to the Content Issue.

7. Now you should see comments where you can start filling things in
   What you fill in depends on the section and type (content or style), but the next steps break things down a bit.

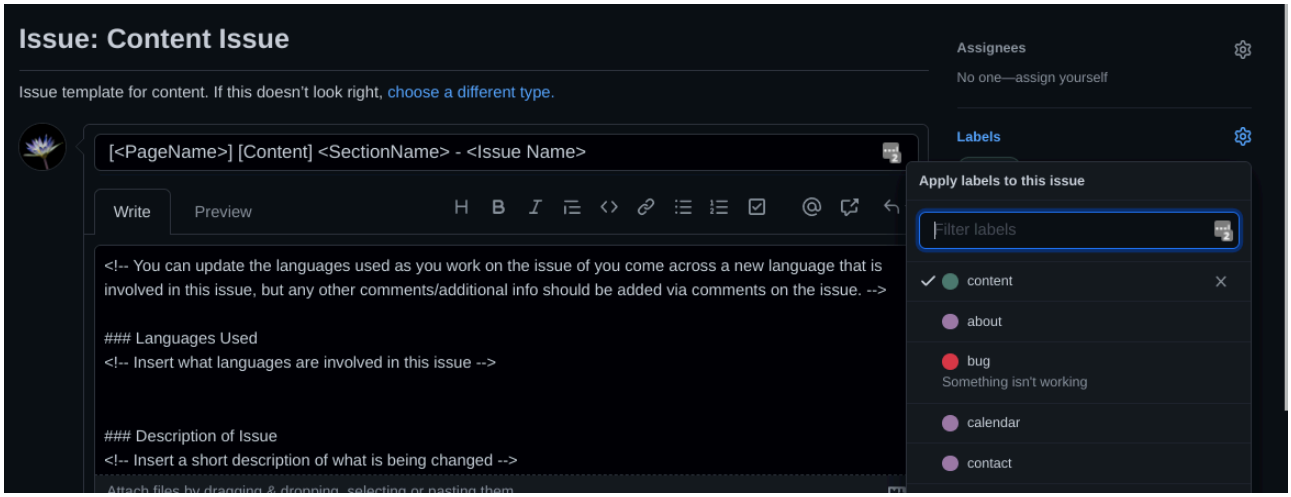

8. Replace anything in **< >** (including the angle brackets themselves)
   This goes for the title and general content, and the comments will say what to replace them with. Deciding what languages are used for a particular issue may take some research, looking around in the code to understand how things work together. For example, there may be pieces that look like you will edit an HTML file, but that file also pulls pieces of information from a MD or YAML file.

   If you have not gone through the Hugo workshop or explored the Website Notes, now may be a good time to look at those first. If you are still unsure, you can place your best guess and leave a **?** next to it like below:

   `Languages Used`

   `HTML, MD?`

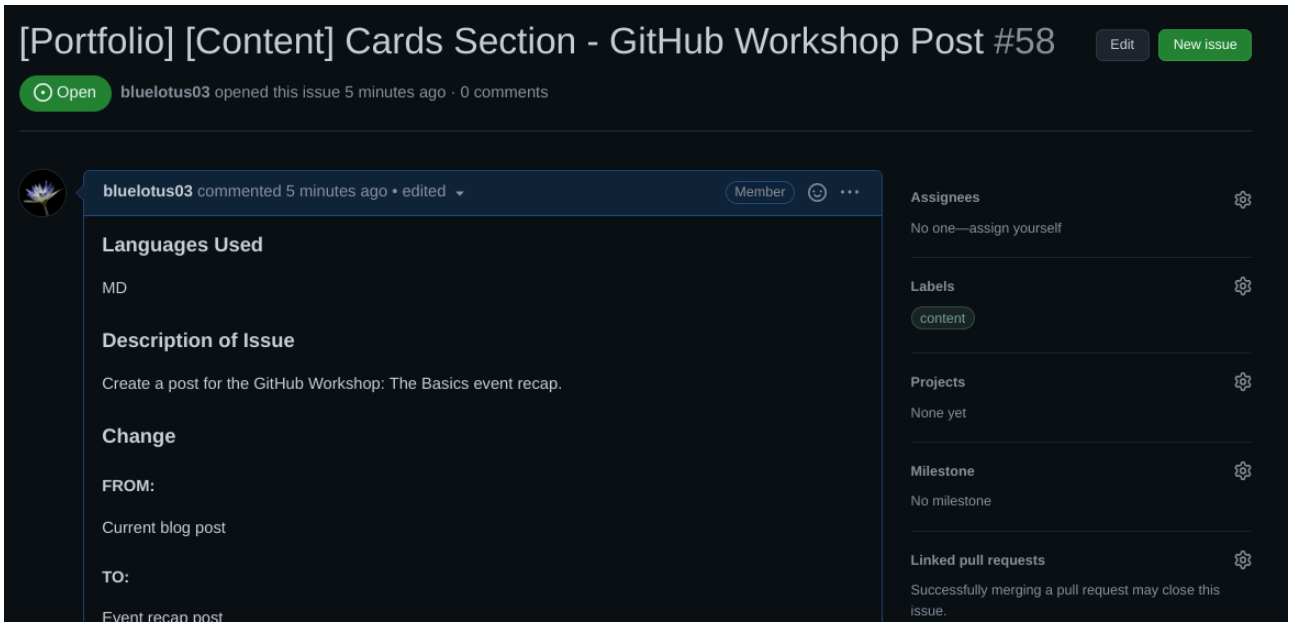

9. On the right side, click the **Labels** option and choose the page the section issue belongs to ***Do not remove any current labels**, only add the current page label

10. Once you have finished filling out the issue, click the green **Submit new issue** button
You should see your issue now like below.

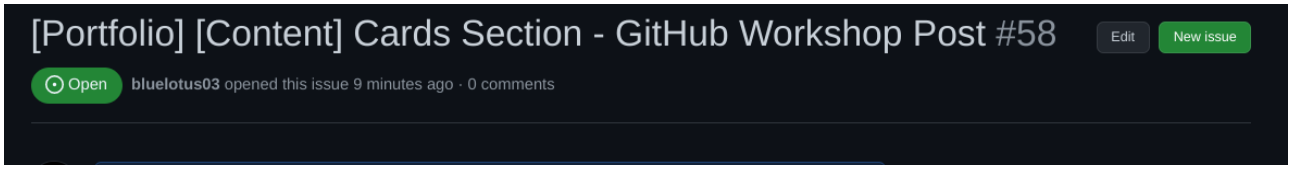

Please note: I did not include screenshots for this issue because it's a blog post that has to be created. Your issues should have screenshots from the current template (for FROM section) and the GWC prototype in Figma (for TO section).

If your issue is also one that will be created, not replace or edit current content from the template, then you can type "Does not exist in current template" in the FROM section. You should still be able to fill in the TO section with a screenshot from our Figma prototype.

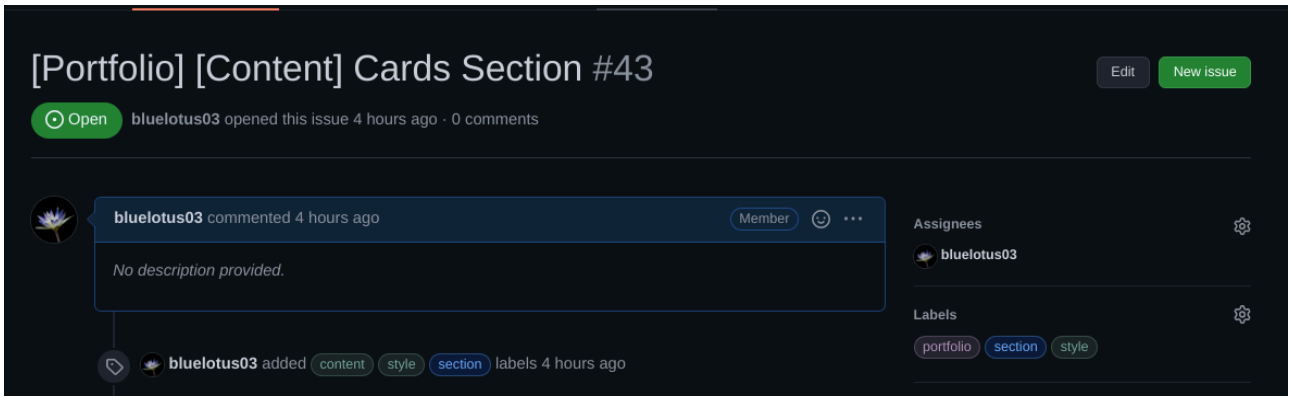

Also, note that no one is assigned to this new issue. That is how it should be. We are focusing on creating all issues for various parts of the website now, and we will assign pieces to work on developing them later.

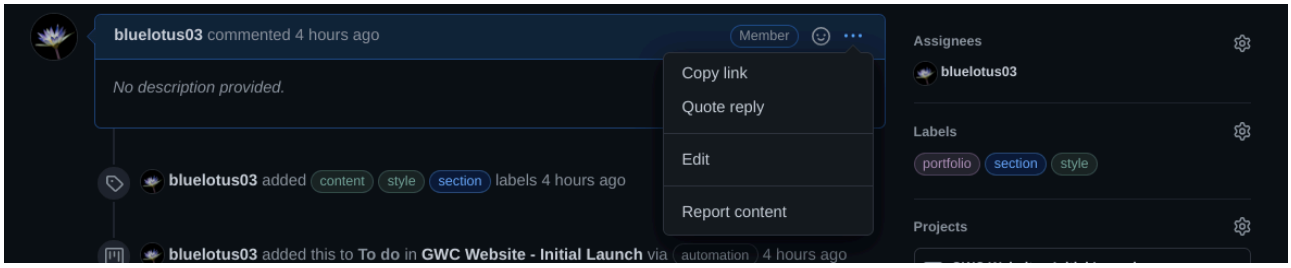

11. Notice the **#number** next to the issue title for your newly created issue

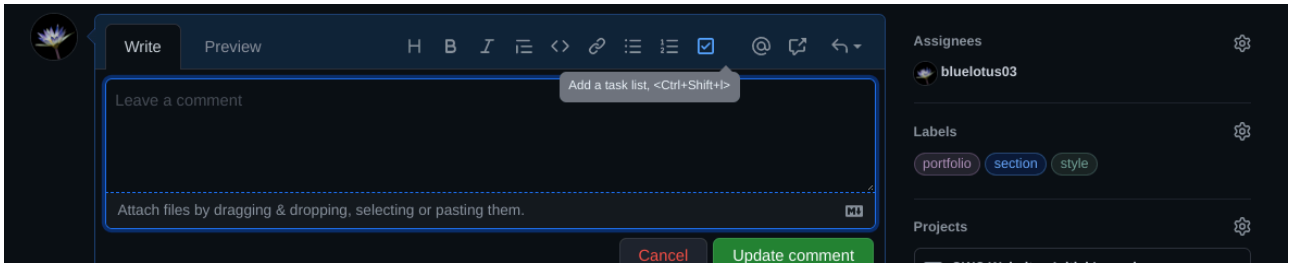

12. Go back to the tab where you Section Issue was open

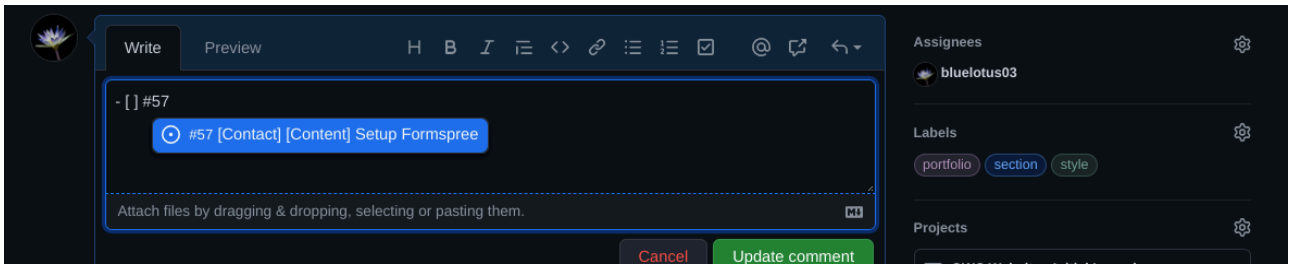

13. Click the **3 dots** next to the smiley face in the blue section and select **Edit**

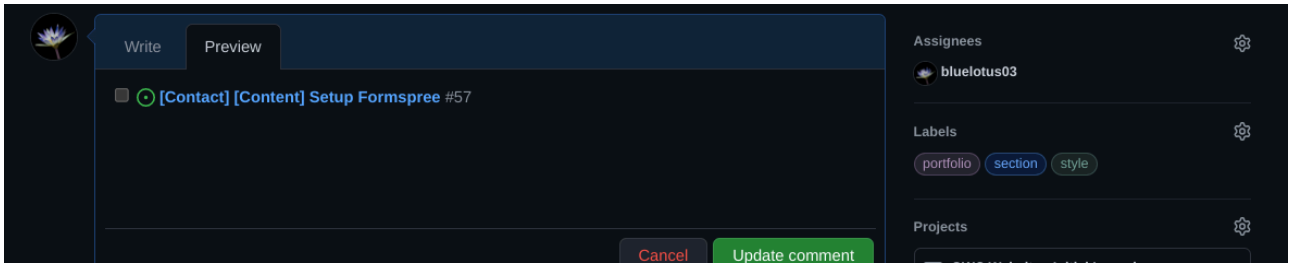

14. Click the **box icon** to add a checkbox

15. Next to the newly entered box, type "**#<your issue number>**" (replace <> with your issue number)
You should see the name of your issue pop up like below, hit **enter** or click elsewhere

It will go back to showing just the number for now, so if you want to check it again, click the **Preview** tab in the blue area above.

16. Now you can continue creating Specific Issues for this section and then adding those issue numbers to this list. Once you're done adding issue numbers, click the green **Update comment** button.

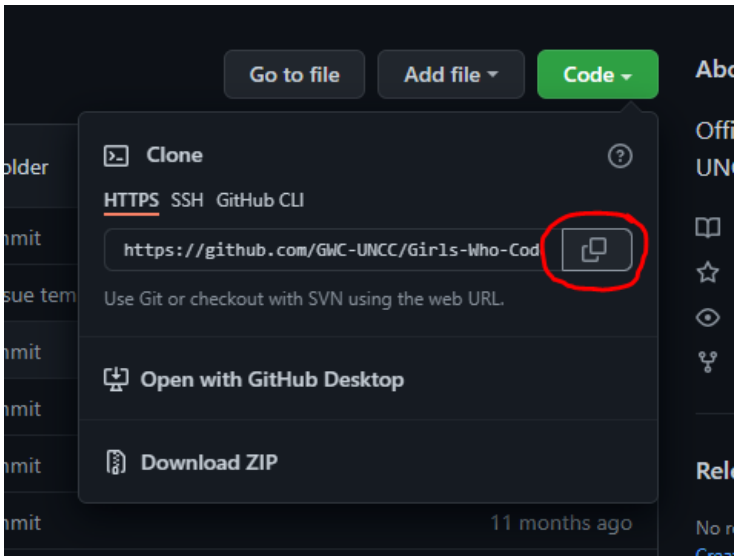

17. If you're done adding Specific Issues to this Section Issue, you can go back to step 1 of this section and choose your next section. Then just repeat these steps for as many section issues you were assigned to! :D

Creating Branches

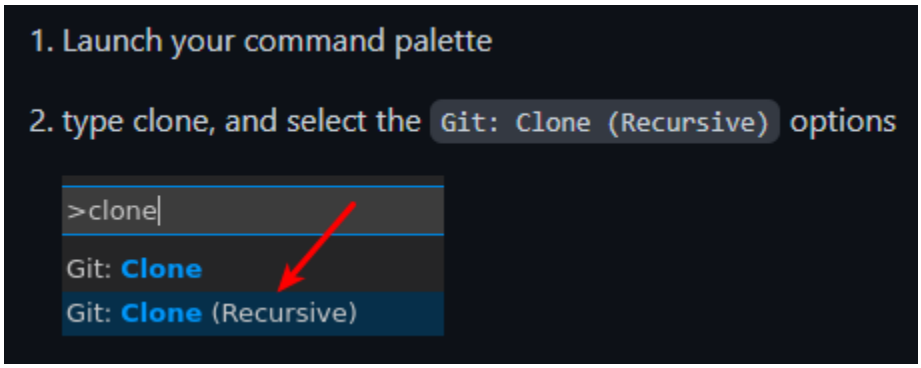

This section will have resources for creating branches to start development work on specific issues.

If this is the first time you are working on the project:

1. **Clone** the [Girls Who Code at UNCC] repo
   Note: This is a direct clone, not a clone of the fork like in the Hugo Workshop. That fork was for initial practice. Now you're working directly with our website repo shown below! :D

In the GitHub workshop, you should have gotten some practice with this for the Git Intro repo. You will follow those same **steps**, just for the GWC repo linked above and **using the Git: Clone (Recursive) option in VS Code** and **paste that link from the previous step**.

2. Run the hugo sever
   We need to make sure everything is cloned correctly.

   Errors?
   If you get errors about html files or it runs but does not show anything in your browser when you click on the link:
   1. Stop the hugo server
   2. Run `git submodule update --init --recursive` in your VS Code terminal
   3. Try running the hugo server again

If you are continuing to work on the project:
You should have gotten some practice creating and pushing to a branch in the GitHub Workshops before. We will follow those same general steps, with the branch naming convention below and using the Girls Who Code repo.

1. **Make sure you are up-to-date with main**
   On the main branch, make sure you pull. Then you are up-to-date and can proceed creating a branch.

2. **Refer to these steps** for creating a branch

3. **Use this naming convention** for your branches working on specific issues:
   `issue/<page-name>/<section-name>/<issue#>`

   Example:
   `issue/about/teams-section/98`

   Note: Just like with creating issues, replace everything in <> with what it specifies to put there, including the <> themselves. The name replacements should directly match the GH issues.

4. Now you are ready to work on your branch!
   Note: Make sure you have meaningful comments in the code you change or add.

Commit, Push, & Pull Request

To commit and push your changes:

1. **Refer to this resource for how to commit and push**
   Important notes:
   - Make sure to have **succinct, meaningful commit messages** that summarize what changes were made in that commit.
   - Commit and push **OFTEN** (avoid losing work, saves to GH)
   - Only push to **your branch**

Once you feel your work is done:

1. **Refer to these steps to create a Pull Request (PR)**
   Note: Don't merge your pull request. This was something you practiced doing in the GitHub Workshop for *your own fork*. Now that you are working on our project directly:
   1. Once you create a PR, it will be reviewed
   2. You will be notified with feedback for further changes or if it has been marked complete and merged with the main branch.

2. **If your next issue relies on a previous one you've worked on:**
   (and if you've already made a PR for that current issue that hasn't been reviewed, approved, merged with main yet)
   - You can create your next branch from your current one, instead of from main, in that case (so that you would have the most up to date changes for that file if the PR hasn't merged with main yet).
   - The PRs would still be merged one at a time after review and approval.

3. **If changes have been requested for your PR:**
   Note: You don't have to create a new PR
   - Make these changes and push to your current branch for that issue
     - This will automatically update the current PR, which is pretty cool!
   - When you're done with your changes, just comment on the PR and tag me "@bluelotus03" in the comment so I know it's ready to review again

Important Notes:

- **1 Issue per Branch**
  - You should create a new branch for each issue you work on
  - A PR should be created for your current branch before creating a new one
    - Ideally, this PR should be approved and merged before starting work on a new issue (but if review process is behind, you can move on)

- **Developers use GWC repo | Trainees use your fork of the GWC repo**
  - Devs have write access to the GWC repo and should be working on it directly
    - You don't have to worry about messing things up as long as you are working on your own branch, **not main**

  - Trainees can practice/build something on their own fork of the GWC repo since they

do not have write access to the GWC repo directly

- You can tell if the repo you are on is your fork or the GWC one by looking in the top left for the path:

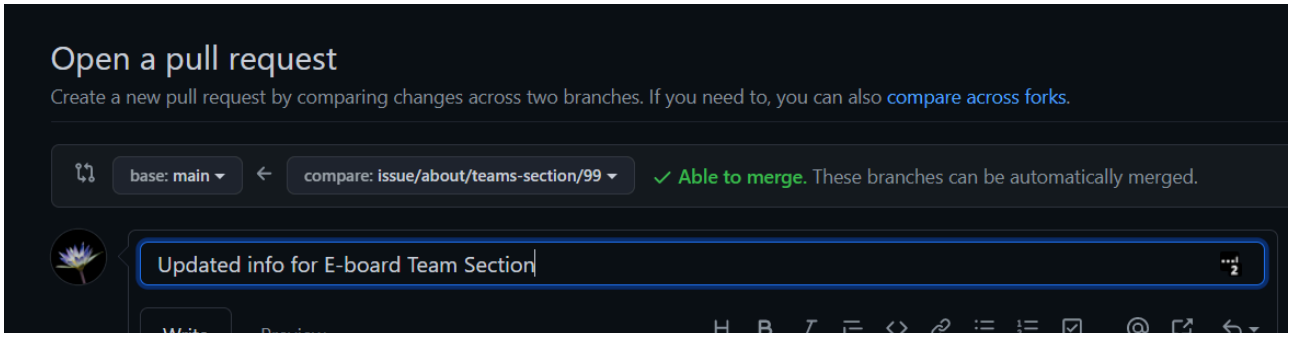

→ **GWC Repo**

→ **Personal Fork**

- **When creating a PR,** should confirm it's going from your branch on GWC repo to the main branch of GWC repo

General Rules

There are a few things to keep in mind being on our team. We want this to be a fun place for us all to learn and work together to build an awesome website!

Ethics & Behavior

1. **We follow the Code of Conduct set by the university**

   No form of harassment, bullying, or anything other than being awesome, supportive women will be tolerated. If you are experiencing any of these things, please report them to Ash or Zaina. Those found responsible will be removed from the team.

2. **We do not plagiarize**

   If you use code solutions you find online, make sure you are allowed to do so. It is always good to give recognition to the original author in the code itself as well. Do not copy/paste anything without permission and/or attribution (when required), this affects our team and the integrity of our code. If you are found doing this, we will remove you from a developer role. Using Stack Overflow code | Other resources for where to look for licensing and fair use

Work on the Team

Now that many of you have write access to the repo, there are a few things we want to note about the code, time, etc.

1. **Work only on things you're assigned to**

   Each week, you get to pick what you want to work on! :D We ask that you stick to working on these things so we do not run into merge issues, stay organized, etc. If you would like to play around with more things that we haven't covered or made available yet, you can always do this with your own fork of the repo, as shown in the **Hugo workshop**.

2. **Take on a realistic amount of issues**

   We are all for you wanting to do a lot of work! Just make sure it's work you can realistically get done that week or for the time frame set. If you find you don't have as much time as you had anticipated, please let us know as soon as possible, as someone else may have to complete that task before our next meeting. Some pieces will rely on others being completed, so it helps the team to just take on what you can when you can.

3. **Never merge with the main branch**

   When your code is complete, you will create a PR with your branch for that issue. This will be reviewed and merged with main if the code is clean, well-documented, and functioning correctly. We have this review process to ensure we keep all code on the main branch functioning well and maintainable for those behind us.

Weekly Breakdowns

Each week's TODO and the next meeting's agenda can be found below! Each week is added as they get closer. The current week will be highlighted. **TODOs will be due each Sunday at 8pm**.

| Jan 31st - Feb 7th |

TODO | Due February 7th at 5pm

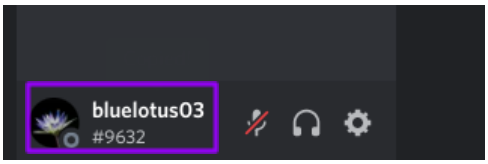

1. Create a **GitHub account** *(if you don't already have one)*

2. Join our **GWC Discord** *(if you haven't already)*
    a. Send us an email from your UNCC email address to get the link to join
    ✉️ **girlswhocodeuncc@gmail.com**

    Please note: To join our Discord, you must be a GWC member.
    Not a member yet? Just join us on **Niner Engage** and you will receive a welcome email when your membership request is accepted. Then you can request the link!

3. FIll out our **Web Team Interest Survey** *(even if you did last year)*
    a. If you need help with getting your username and identifier, see below:

    Find your name in the lower left corner of Discord and **click it**

    You'll see a notification that it has been copied, and you can **paste it** into the survey

    b. Please note: A question has been added to the **Web Team Interest Survey** to upload a headshot. If you already submitted a response before this, **see here**.

Meeting Agenda | February 7th at 5pm

1. Check that everyone was able to complete the TODOs for the week [resolve any issues]

2. Go over new GitHub, Figma board, Google Drive folder, and Discord channel organization

3. Discuss TODOs for the following week

| Feb 7th - Feb 14th |

TODO | Due February 14th at 5pm

1. Environment Setup

   Follow the **steps above** to get your environment set up *(if you haven't already done these)*
   If you have already completed these steps but it has been a while, feel free to do a quick refresher running through the materials again and noting any questions you have.

   Once setup is completed (including running through the workshops), and you have filled out the Web Team Survey, you will be added to our team on GitHub. **Completion of workshops will be seen by your GitHub history and is required for all but Trainees.**

2. Web Team Headshots

   Please note: A question has been added to the **Web Team Interest Survey** to upload a headshot. If you already submitted a response before this, please upload your headshot to our **Web Team Headshot** form. If you do not want a headshot included on our Web Team or social media, please mark this on the corresponding question in the survey.

   If the form does not let you upload a headshot, you can DM Ashley on Discord with your headshot or "opting out." If you receive a file size error, your image may be too large. You can try uploading a smaller file size, or use the Discord option.

Meeting Agenda | February 14th at 5pm

1. Check that everyone was able to complete the TODOs for the week [resolve any issues]
2. Go over any team updates (due dates, access, positions, etc.)
3. Look at our GitHub, Figma, and Google Drive setup
4. Discuss and assign our first GitHub issues and due dates

| Feb 14th - Feb 21st |

TODO | Due February 22nd at 8pm

1. Complete Any Previous Tasks

   If you have missed the previous meetings, make sure you go through and complete the TODOs for them before our next meeting. Please note the Web Team Interest Survey is now closed, but if you already filled that out, you can still complete the other tasks.

   If I have not marked you as having received your Discord or GitHub handles or headshot, please get those to me by Tuesday, Feb 15th at 5pm. That is the last day access and items will be added to our different platforms with those. You will still be able to switch roles/sub teams later, but being added to our team on GitHub will be set Feb 15th.

2. Check Your Access

   GitHub
   Please check that you are on the right sub teams on our GitHub Web Development Team. If you believe you are not on the right team, please first consider:
   a. You were put on the team with the least access among your chosen position(s). For example, if you chose Trainee and Developer, you are currently a Trainee until you would like to be moved to a Developer role.
   b. If you chose a Developer, Analyst, or Archivist role but have not yet completed the workshops required in the **previous TODO**, you have been added as a Trainee.

   If after considering these, you are still on the wrong team or you want to change teams, please let Ash know via Discord DM.

   Figma
   Everyone on the Web Team should have view access for our Figma board called **GWC Website Prototype**. If you are unable to view this, please let Ash know via Discord DM.

   Google Drive Folder
   Everyone on the Web Team should have view access for our Google Drive folder called **GWC Web Team - SPR '22**. If you are unable to view this folder, please let Ash know via Discord DM.

3. Create All Relevant GitHub Issues

   Please follow the steps **here** to complete your assigned GitHub issues.

4. Meeting Prep
   - Note your progress, and any issues or questions, for the next meeting

Meeting Agenda | February 21st at 5pm

1. Check that everyone was able to complete the TODOs for the week [resolve any issues]
2. Assign issues, set due dates, walk through issues and any questions

| Feb 21st - Feb 28th |

TODO | Due February 27th at 8pm

1. Complete Any **Previous Tasks**
2. Meeting Prep
    - Note your progress, and any issues or questions, for the next meeting
    - Have an idea of what you want to work on as we start development next week! :D

Meeting Agenda | February 28th at 5pm

1. Check that everyone was able to complete the TODOs for the week [resolve any issues]
2. Assign issues, walk through creating and pushing our first branches

| Feb 28th - March 16th | (minus Spring Break the week of March 7th)

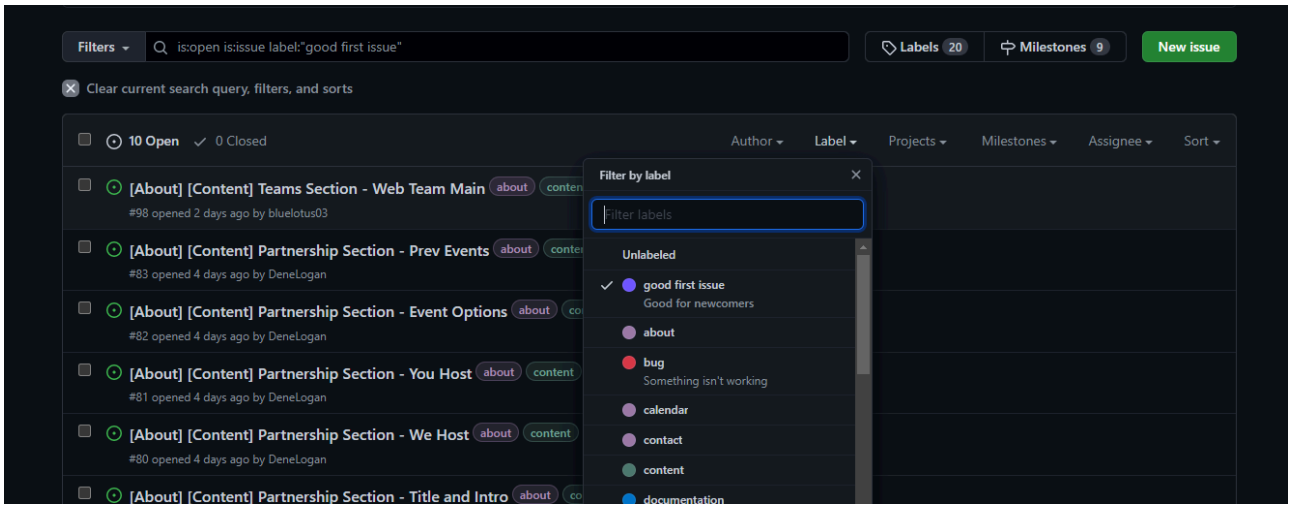

TODO | Due March 14th at 8pm

1. Finish all steps of **Environment Setup**

    The final due date is **tonight, Feb 28th for anyone wanting to be a Developer, Archivist, or Analyst.** Make sure to **DM Ashley on Discord when you're done** so she can check the GitHub history to confirm and then add you to the proper team(s).

2. Devs: If not assigned an issue to work on yet, reach out to Ashley to pick one.

    Make sure it's an issue from the **"good first issue" labeled issues on Github**. You can use the Label dropdown on the issues page to sort by issues with that label. You should also be able to see if that issue has already been assigned to someone (if their GH logo is listed under the "Assignee" section.

3. Devs: If assigned an issue to work already, work on that issue this week (don't have to finish)

   Follow the **Creating Branches** steps, and reach out if you have any questions running through those! For working on the code, see the **Hugo section** for more resources.

4. Meeting Prep
   - Note your progress, and any issues or questions, for the next meeting
   - Have an idea of what you want to work on next week! :D

Meeting Agenda | March 16th at 5pm

1. Check that everyone was able to complete the TODOs for the week [resolve any issues]
2. Assign issues, set due dates

| March 16th - March 21st |

TODO | Due March 20th at 8pm

1. Devs: **If assigned a GitHub issue**, continue to work on this

   Your goal is to push what you have been able to do to your branch by March 20th at 8pm. If you run into any issues, please let Ash or Zaina know in Discord. You can also pop your questions in the #web-team channel.

2. Devs: **If not assigned an issue to work on yet**, reach out to Ashley to pick one.

   Make sure it's an issue from the **"good first issue" labeled issues on Github**. You can use the Label dropdown on the issues page to sort by issues with that label. You should also be able to see if that issue has already been assigned to someone (if their GH logo is listed under the "Assignee" section).

3. Meeting Prep
   - Note your progress, and any issues or questions, for the next meeting
   - Have an idea of what you want to work on next week! :D

Missed the meeting or want a refresher?
The meeting was recorded today and added to the **Hugo Resources** section.

Meeting Agenda | March 21st at 5pm

1. Check that everyone was able to complete the TODOs for the week [resolve any issues]
2. Assign issues, set due dates

| March 21st - March 28th |

TODO | Due March 27th at 8pm

1. Devs: **If assigned a GitHub issue**, continue to work on this

   Your goal is to push what you have been able to do to your branch by March 27th at 8pm. If you run into any issues, please let Ash or Zaina know in Discord. You can also pop your questions in the #web-team channel.

2. Devs: **If not assigned an issue to work on yet**, reach out to Ashley to pick one.

   Make sure it's an issue from the **"good first issue" labeled issues on Github**. You can use the Label dropdown on the issues page to sort by issues with that label. You should also be able to see if that issue has already been assigned to someone (if their GH logo is listed under the "Assignee" section).

3. Meeting Prep
   - Note your progress, and any issues or questions, for the next meeting
   - Have an idea of what you want to work on next week! :D

Meeting Agenda | March 28th at 5pm

1. Check that everyone was able to complete the TODOs for the week [resolve any issues]
2. Assign issues, set due dates

| March 28th - April 4th |

TODO | Due April 3rd at 8pm

1. Devs: **If assigned a GitHub issue**, continue to work on this

   Your goal is to push what you have been able to do to your branch by April 3rd at 8pm. If you run into any issues, please let Ash or Zaina know in Discord. You can also pop your questions in the #web-team channel.

2. Devs: **If not assigned an issue to work on yet**, reach out to Ashley to pick one.

   Make sure it's an issue from the **"good first issue" labeled issues on Github**. You can use the Label dropdown on the issues page to sort by issues with that label. You should also be able to see if that issue has already been assigned to someone (if their GH logo is listed under the "Assignee" section).

3. Meeting Prep
   - Note your progress, and any issues or questions, for the next meeting
   - Have an idea of what you want to work on next week!

Missed the meeting or want a refresher?
The clarifications reviewed in this meeting have been added to the **Important Notes** section.

- Note: The branch naming convention has been updated as well.

A helpful reference for more with YAML has also been added to the **YAML** section.

Meeting Agenda | April 4th at 5pm

1. Check that everyone was able to complete the TODOs for the week [resolve any issues]
2. Assign issues, set due dates

| April 4th - April 11th |

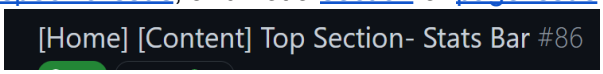

TODO | Due April 10th at 8pm

1. Devs: **If assigned a GitHub issue**, continue to work on this

   Your goal is to push what you have been able to do to your branch by April 10th at 8pm. If you run into any issues, please let Ash or Zaina know in Discord. You can also pop your questions in the #web-team channel (it's good to help others who may have similar questions too).

2. Devs: **If not assigned an issue to work on yet**, reach out to Ashley to pick one.

   You can use the Assignee and Label dropdowns on the issues page to sort by issues that have not yet been assigned to anyone and that are "content" issues. Make sure the issue has **[<Page-Name>][Content] <Section Name> - Issue Name**, so that you know it is a specific issue, and not a section or page issue. See example below:

3. Meeting Prep
   - Note your progress, and any issues or questions, for the next meeting
   - Have an idea of what you want to work on next week!

Easier Issues - 113, 114, 117, 70, 59
Harder Issues - 97, 87

Meeting Agenda | April 11th at 5pm

1. Check that everyone was able to complete the TODOs for the week [resolve any issues]
2. Assign issues, set due dates

| April 11th - April 18th |

TODO | Due April 17th at 8pm

1. Devs: **If assigned a GitHub issue**, continue to work on this

   Your goal is to push what you have been able to do to your branch by April 17th at 8pm. If you run into any issues, please let Ash or Zaina know in Discord. You can also pop your questions in the #web-team channel (it's good to help others who may have similar questions too).

2. Devs: **If not assigned an issue to work on yet or have completed your issue(s)**:

   Start learning/reviewing **CSS basics** and then focus on **SCSS basics** to prepare for taking style issues next week. You can view the **style/overall_styling/8** branch to see file changes that have been made to get some of the styling variables set. Today in the meeting we will have also looked at how we use those variables a bit.

3. Meeting Prep
   - Note your progress, and any issues or questions, for the next meeting
   - Have an idea of what you want to work on next week! (Review [style] issues)

	#131	Completed	April 17th at 8pm	

Missed the meeting or want a refresher?
The following topics/clarifications have been added to the guide and reviewed today:

- Notes on **PRs**
- Using **Bootstrap**
- **Linking text** in YAML files
- **SCSS** resources

Meeting Agenda | April 18th at 5pm

1. Check that everyone was able to complete the TODOs for the week [resolve any issues]
2. Assign issues, set due dates

| April 18th - April 25th |

TODO | Due April 24th at 8pm

Note: We don't want to change the .scss files (usually), just plug in the **class names** where needed in the .html files.

1. Devs: **If assigned a GitHub issue**, continue to work on this

   Your goal is to push what you have been able to do to your branch by April 24th at 8pm. If you run into any issues, please let Ash or Zaina know in Discord. You can also pop your questions in the #web-team channel (it's good to help others who may have similar questions too).

2. Devs: **If not assigned an issue to work on yet or have completed your issue(s)**:

   Keep learning/reviewing **CSS basics** and **SCSS basics** to prepare for, and work on, style issues. You can view **PR #167** to see file changes that have been made to get some of the styling variables set. In that PR, you will see the list of when to use what classes and what those do. Today in the meeting we will have also looked at how we use these classes a bit.

3. Meeting Prep
   - Note your progress, and any issues or questions, for the next meeting
   - Have an idea of what you want to work on next week! (Review [style] issues)

Meeting Updates

PRs - see status from this past week in the previous date section

PR #	Teammate	Message	Branch	GH Issues	Status
173	**Mariam**	"Changed profile card background color"	issue/about/teams-section/63	#63	Approved, Merged GH Branch Deleted
174	**Dene**	"changing btn and border color"	issue/Contact/main-section/13	#13, #14	Updated, Merged GH Branch Deleted
175	**Dene**	"Adding shadow effect to title"	issue/About/Sponsorship-section/71	#71	Updated, Merged GH Branch Deleted

	#116	Not Started	April 24th at 8pm	Text format on calendar page

Easier Issues: #13, #116, #71, #62, #63, #118, #119, #67, #172
More Challenging: #171

Missed the meeting or want a refresher?
See a rundown below on updates, notes, etc. You can view the issues assigned for this week above, and the PR statuses from this past week in the previous date section.

General Updates:

- We merged **13 PRs** and completed over **20 issues** this week! That is AWESOME! 🤦‍♀️
- We are **80% done with Content**! (Ash is working to finish remaining issues)
    - Keep a lookout for a social media shoutout for our Content Milestone this week!
- Starting styling **TODAY**! 🎉
    - Focus this week: colors, text formatting, images & remaining content
    - Focus next week: icons, spacing, sizing, etc.
- **Our launch is in 2 weeks**, coming up fast but pretty exciting! 😄

Notes on Clean Code/ Code Use:

- **Make sure you are leaving comments for what your code is doing**
    - Documentation is important for maintainability, and we will need to revisit this before leaving it for the next team members who come behind us.

- **If leaving a comment for something to do later**, use “TODO:” in the beginning of your comment.
    - This is important to stay consistent and be able to search for this term later.

- **Remove unnecessary spacing or commented out code from your files**
    - If we need to review previous code or use it later, we can look at previous versions on GitHub.

- **Make sure you use variable names, labels, file names, etc. that fit their purpose**.
    - If you are repurposing a file or pieces of code, rename them to fit the new purpose.

- **If you use a pre-existing file to do something,** always make sure you know where that file or its code is being used before editing it.
    - It could impact another section of the site and cause merge issues if it is already serving a purpose for something else
    - It is important to know when to create new files verses editing current ones

- **Partials are only really needed if:**
    - It is a section of code that will be reused in various parts of the site/ different pages
    - Or if it is a very long page and makes sections more maintainable to break them up (like the about page)
    - For example: If it is something like the calendar page where it is all information specific to the calendar events and isn’t reused elsewhere, it can all be in one html file in the calendar folder calendar/calendar.html and pull from one yml file calendar.yml

- **{{ range }} is only for sections that are looping through a list of items**
    - If it is not a list, but rather different labels, you can just call them as is
        - For example {{ .title }}
    - If you still need to specify a section of the yml file that it’s coming from, you can use {{ with .sectionname }}, and then call the label you needed in that section
    - For example:

```
{{ with .events_section }}
        <h2>{{ .title }}</h2>
{{ end }}
```

Note: *All of those points are assuming the page/main location of the data has already been stated earlier in the file with something such as {{ Site.Params.sectionname }} or {{ Site.Data.filename }}.*
For example: {{ Site.Data.calendar }}

General Notes:

- **If you don't see a branch in VS Code that you think should be there,** you can start typing the name of the branch to see other options that may not have been initially displayed
    - If you don't see one in GH that you think should be there, it likely has not yet been pushed and is currently only local for you or whoever created the branch (if it hasn't been deleted from a previous PR/merge).

- **If you have questions, please try to ask before the weekend if you can**
    - Issues aren't due until Sunday night, but it is highly recommended to look over things related to your issue before then and see if you might have questions or need some 1-on-1 help.

- **If you do ask questions,** it is definitely okay to leave comments on your PR, but for a faster response, please also reach out on Discord to let me or Zaina know there is a question on GitHub (just want to make sure we see it in time to help).

Meeting Agenda | April 25th at 5pm

1. Check that everyone was able to complete the TODOs for the week [resolve any issues]
2. Assign issues, set due dates

| April 25th - May 2nd |

TODO | Due April 29th at 5pm

1. Devs: **If assigned a Review**, work on this between April 27th and 29th

   Ash will let you all know as soon as the site is ready for review by Wednesday, April 27th at 5pm. Our goal is to each review our assigned pages and submit bug issues if you see something not working correctly on desktop or mobile view. These bug issues are due by April 29th at 5pm, and Ash and Alex will work to resolve them over the weekend before the launch. If you run into any issues, please let Ash or Zaina know in Discord. You can also pop your questions in the #web-team channel (it's good to help others who may have similar questions too).

2. Devs: **If not assigned a Review or just wanting to learn more**:

   You can continue learning/reviewing **CSS basics** and **SCSS basics** and look at all of the recent changes made to the website and our repo. You can also explore editing the code on your own fork, like we did in the Hugo workshop!

3. Meeting Prep
   - **Just mark your calendar for our Website Launch Party!**

Meeting Updates

1. **Updates from Last Week**

2. **How-To Review**
   We will submit GitHub issues just like before, but this time they will be **bug reports**.
   Here is the site to test it: https://gwc-uncc.github.io/Girls-Who-Code-at-UNCC/

Page Review Assignments (starting Wednesday, April 27th at 5pm)

Teammate	Page(s)	Due Date	Status
Ash	All Pages	April 29th at 5pm	Not Started
Zaina	Home	April 29th at 5pm	Not Started
Dene	Contact, Calendar	April 29th at 5pm	Not Started
Michelle	Portfolio, Library	April 29th at 5pm	Not Started
Mariam	Portfolio, About	April 29th at 5pm	Not Started
Destanee	About	April 29th at 5pm	Not Started
Liyu	About page - Member Section	April 29th at 5pm	Not Started

Missed the meeting or want a refresher?
The following was covered at the meeting:

- **We will not be taking issues this week**
  - The remaining issues are a bit more complicated and not all of them have GH issues on our repo (limited time constraints)

- **If you were not able to complete your issue last week**
  - Check if it's already been completed by Ash. If not, and you can complete it by Tuesday at 5pm, you are welcome to finish it!

- **We are combining the final issue & review process this week**
  - Final issues will be wrapped up by Ash by Wednesday, April 27th at 5pm
  - Review process will take place from April 27th at 5pm to Friday, April 29th at 5pm
    - See Meeting Updates section above for assignments

- **Some issues have been marked as enhancements**
  - These issues may be completed after the launch or left for the future Web Team members to add if they'd like
  - Our Prototype was our ultimate goal, but we are working with what we can do as well in the time frame we had with all of our schedules
  - But no worries! This is meant to be a project that future Web Team members can maintain and add to

- **Our Launch Party is next Monday, May 2nd at 5pm!**
  - **Monday, May 2nd from 5 - 6pm**
  - **Location: Tables behind the Student Union**
  - All are welcome to come celebrate with us!
    See agenda below

Party Agenda | May 2nd at 5pm

1. Website Launch! (swapping over as GWC's main site on all our links)
2. Web Team Certificates (receive your certs for your role & hours put in)
3. Hangout! (snacks and drinks will be provided)

   Upon ending, those of us going to the EOY Celebration will head out to Optimist Hall in Charlotte! We will update you on carpool options or taking the Light Rail.
